University of Gdańsk

Subject card

Subject name and code	Marine ecology - lecture, PG_00054214		
Field of study	Oceanography		
Date of commencement of studies	October 2024	Academic year of realisation of subject	2024/2025
Education level	postgraduate studies	Subject group	Obligatory subject group in the field of study
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish Polish
Semester of study	1	ECTS credits	2.0
Learning profile	academic	Assessment form	
Conducting unit	Katedra Funkcjonowania Ekosystemów Morskich -> Faculty of Oceanography and Geography		
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. Adam Sokołowski	
	Teachers	dr hab. Adam Sokołowski	

Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	15	10.0	25.0	50

Subject objectives	Introducing students to selected basic aspects of marine ecology, with a particular emphasis on the impacts of abiotic and biotic factors on the structure and functioning of marine organisms at different levels of their biological organization.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[OCEANMU2-W06] knows and identifies potential threats to the marine environment on a local and global scale resulting from strong anthropopressure, predicts their effects on various time and space scales	Understands and identifies threats to marine biocenosis arising from human activities, and recognises and predicts their effects on marine organisms.	[SW4] test/exam - oral or written
[OCEANMU2-W02] knows and understands complex processes and phenomena occurring in the marine environment, with particular emphasis on the coastal zone, as well as complex relationships between living and non-living elements of the aquatic environment	Understands ecological processes and phenomena occurring in the marine environment, as well as the relationships and interactions between abiotic and biotic environmental factors.	[SW4] test/exam - oral or written
[OCEANMU2-K02] is ready to take full responsibility in terms of actions taken and compliance with professional ethics and principles intellectual honesty, is aware of the importance professional approach in every situation	Undertakes activities in the field of marine ecology in a professional and responsible manner, respecting the principles of professional ethics and integrity.	[SK4] test/exam - oral or written
[OCEANMU2-U01] is able to formulate and solve complex and unusual problems regarding the functioning of individual components of the marine environment using knowledge from various fields and scientific disciplines and propose solutions	Identifies problems and is able to formulate issues related to the structure and functioning of marine biocenosis, and proposes solutions through the application of interdisciplinary knowledge.	[SU4] test/exam - oral or written
[OCEANMU2-U02] can use scientific terminology fluently and appropriately in presenting and discussing problems in the field of oceanography	Knows and accurately applies taxonomic nomenclature and scientific terminology in the field of marine ecology.	[SU4] test/exam - oral or written

Subject contents

1. The place of marine ecology in natural sciences, basic ecological concepts and definitions, as well as research topics and methodology.
2. Ecological phenomena, processes and relationships at the level of the organism, population and biocenosis.
3. Abiotic factors (i.e., salinity, temperature, substrate type, light, tides, hydrostatic pressure, sea currents and wave actions, gases dissolved in water) and biotic (i.e., interspecies interactions, food quality and availability) and their impact on the distribution and biodiversity of marine organisms. Morphological and physiological modifications and adaptations to habitat conditions.
4. Adaptation of organisms to changing environmental conditions (factors).

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
written exam	50.0%	100.0%
