

Subject card

Subject name and code	Field exercises - Regional geology of the southern Poland, PG_00091118						
Field of study	Geology						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Optional subject group		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		2.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Laboratory of Marine Geology -> Department of Chemical Oceanography and Marine Geology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Agnieszka Marciniowska				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	30.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		7.0		25.0	62
Subject objectives	The field course in the Sudetes are devoted to the geological structure of the Central Sudetes in context of geological history of the Lower Silesia block. The issues addressed include Paleozoic tectonic structures, the development of the Variscan orogenesis in the Sudetes, and the formation and filling with sediments of the mid-Sudeten depression. They learn about the different lithological varieties of magmatic, metamorphic and sedimentary rocks, learn about the processes leading to their formation, while taking into account the dissimilarity of the different geological units of the Sudetes.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GEOLL3_U10] is able to work individually and cooperate in laboratory and field groups performing various functions in them and performing various tasks	Is able to work individually and in a group during field activities, performing various functions.	[SU1] oral statement/conversation/discussion [SU4] test/exam - oral or written [SU5] implementation of a problem task [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[GEOLL3_K05] is willing to comply with the principles of occupational safety and health, takes care of specialized equipment entrusted to them, is aware of the risk connected with the performed work	Applies occupational health and safety rules applicable to mining plants and geological sites. Is aware of the hazards in them. Takes proper care of the field equipment he owns.	[SK1] oral statement/conversation/discussion [SK6] demonstration of practical skills [SK8] observation of student's independent or team work
	[GEOLL3_U05] can reconstruct the history of geological development of selected regions in Poland and in the world on the basis of maps, cross-sections and exposures in the field	Can reconstruct the history of geological development of a selected region of the Sudetes, using knowledge of field geological sites and literature materials	[SU1] oral statement/conversation/discussion [SU3] text preparation/written work [SU4] test/exam - oral or written [SU5] implementation of a problem task [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[GEOLL3_U06] is able to identify geological objects and combine them with geological processes and anthropogenic environmental transformations	Can describe geological sites, interpret the geological and anthropogenic processes visible in them.	[SU1] oral statement/conversation/discussion [SU3] text preparation/written work [SU4] test/exam - oral or written [SU5] implementation of a problem task [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[GEOLL3_W03] knows and identifies paleontological, mineralogical, petrographic and structural objects using appropriate methods	Knows the rocks and minerals in the geological sites visited, correctly identifies them using known methods.	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion
	[GEOLL3_W05] knows the structure and geological development of selected regions in Poland and in the world	Knows the geological structure of the Sudetes and its development against the background of the geological structure of the Variscan Orogen of Europe.	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion
	[GEOLL3_W04] knows and understands phenomena and processes occurring in the past and today in the interior of the Earth and on its surface, defines the methods of how to study them	Knows and understands the processes leading to the formation of certain types of rocks.	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion
	[GEOLL3_U01] is able to apply basic measurement and analytical techniques in the field and in the laboratory, plans to conduct research and measurements	Is able to plan appropriate researches to identify minerals, rocks and describe a geological site.	[SU1] oral statement/conversation/discussion [SU4] test/exam - oral or written [SU5] implementation of a problem task [SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[GEOLL3_K01] is willing to plan and implement, individually or as a team, the next stages of the entrusted task, take responsibility for its results, effectively cooperate in the team by performing various roles in it	Plans work in geological sites with full responsibility for its progress.	[SK1] oral statement/conversation/discussion [SK4] test/exam - oral or written [SK5] implementation of a problem task [SK6] demonstration of practical skills [SK8] observation of student's independent or team work
	[GEOLL3_W01] knows and understands the basic natural phenomena and explains their course in relation to geological processes	Knows and understands the basic rock-forming processes, explains their course.	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion [SW5] implementation of a problem task

	Course outcome	Subject outcome	Method of verification
	[GEOLL3_K02] is willing to take full responsibility in the field of actions taken and to comply with the principles of professional ethics and intellectual honesty, is aware of the importance of a professional approach in every situation	During field activities, he makes decisions and is aware of their consequences. Follows the rules of mutual cooperation.	[SK1] oral statement/conversation/discussion [SK4] test/exam - oral or written [SK6] demonstration of practical skills [SK8] observation of student's independent or team work
	[GEOLL3_W08] knows the basic principles of occupational health and safety, legal regulations conditioning geological and engineering activities	Knows the safety rules for field activities in mining plants and geological sites. Uses appropriate health and safety measures.	[SW1] oral statement/conversation/discussion
Subject contents	1. To introduce the student to the geological structure of selected structural units of the Sudetes Mountains. 2. Making geological documentation using simple field methods. 3. Identification of rocks, minerals and fossils. 4. Identification of geological structures. 5. Reconstruction of geological processes on the basis of field and literature information. 6. Learning the geologist's field workshop and geological problem thinking.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	problem task, text development	51.0%	20.0%
	written/oral test	51.0%	60.0%
	field work	51.0%	20.0%
