

Subject card

Subject name and code	Hydraulics and hydromechanics - lecture, PG_00091475						
Field of study	Water Management and Protection of Water Resources						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study Subject group related to practical vocational preparation		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		1.0		
Learning profile	practical		Assessment form				
Conducting unit	Pracownia Hydrologii -> Department of Hydrology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Małgorzata Robakiewicz				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		2.0		10.0	27
Subject objectives	1. To expand students' knowledge of the behavior of water under the action of external forces (laws governing statics or fluid motion).2. To familiarize students with the characteristics of water flow in pipes, open troughs, channels and soil (laws of fluid mechanics).3. To indicate the practical application and use of water and its physical properties in engineering.4. To educate the basics of engineering calculation methods of river hydraulics.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GWOZWL3-K03] systematic further education and professional development, updating and expand their knowledge and skills, understands the limitations of his own knowledge in the context of civilization progress and recognizes authorities in the professional and scientific environment	K_K03 - is ready to systematically update and expand his knowledge and skills	[SK4] test/exam - oral or written
	[GWOZWL3-W01] in advanced basic biological, physical and chemical processes and phenomena, as well as analyzes their mutual relations and course in relation to natural environment and socio-ecological systems	K_W01 - knows and understands to an advanced degree the basic phenomena of fluid mobility	[SW4] test/exam - oral or written
	[GWOZWL3-U08] use basic mathematical and statistical methods to analyze data and describe phenomena and processes occurring in the environment, as well as methods of information technology to assess the risk of threats to the of the environment, especially the hydrosphere	K_U08 - can use basic mathematical and statistical methods to analyze data and describe phenomena related to fluid mobility	[SU4] test/exam - oral or written
	[GWOZWL3-W04] research techniques, methods and tools currently used in water management and protection of water resources both in the field of natural sciences and social sciences, including basic statistical and information technology tools that make it possible to describe, model and interpret data on phenomena and processes occurring in the aquatic environment, as well as tools for describing relationships in social-ecological systems	K_W04 - knows and understands research techniques and methods used in hydraulics including basic statistical tools to describe and interpret data on phenomena and processes in the aquatic environment	[SW4] test/exam - oral or written
Subject contents	1. Physical properties of liquids.2. Basic laws of hydrostatics.3. Study of the phenomena occurring in water during movement - fluid dynamics.4. The application of hydrology to the fundamentals of environmental engineering and water management - water structures, their operation and impact on the natural environment.5. Hydraulics of water structures - regulation of water outflow conditions.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test	51.0%	100.0%
Recommended reading	Basic literature	Jarosz A., 1998, Hydraulika. Hortpress. Jeżowiecka-Kabsch K., Szewczyk H., 2001, Mechanika płynów. Oficyna Wydawnicza PWr, Wrocław.
