

Subject card

Subject name and code	Physical oceanography laboratory exercise, PG_00131474						
Field of study	Marine Hydrography						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to practical vocational preparation		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		3.0		
Learning profile	practical		Assessment form				
Conducting unit	Laboratory of Physical Oceanography -> Department of Physical Oceanography and Climate Research -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Marek Kowalewski				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	45.0	0.0	0.0	45
	E-learning hours included: 0.0						
	Additional information: In exceptional cases, one lecture may be held remotely (online).						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		3.0		30.0	78
Subject objectives	To know and understand: • spatial and temporal variation of temperature, salinity and density of seawater and the processes that shape this variation • basic dynamic processes in the sea (forces acting on water masses in the sea, geostrophic currents, Ekman theory, mixing, wind waves) • fundamentals of marine acoustics (sound propagation and refraction in the sea; sound channel)						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[HML3-K01] correctly identify and resolve professional dilemmas, especially in the aspects of security and entrusted property	He/she can plan and complete tasks in a timely manner during individual and team work. He/she is able to correctly identify and resolve dilemmas related to exercise performance.	[SK5] implementation of a problem task
	[HML3-W04] the issue of measurements related to the exploration of sea basins and inland waters and tools allowing to describe, interpret and present the results of measurements	He/she knows and understands the methods, techniques and research tools used in the physical study of the seas and oceans	[SW5] implementation of a problem task
	[HML3-U14] use the applicable terminology in presenting and discussing problems related to the field of study	He/she is able to use the applicable terminology in presenting and discussing problems in physical oceanography.	[SU3] text preparation/written work
	[HML3-U08] independently use the professional literature available in traditional and electronic form, make an assessment, critical analysis and synthesis as well as the correct interpretation of the information obtained	He/she is able to independently use the professional literature on physical oceanography available in traditional and electronic forms, evaluate, critically analyze and synthesize, and correctly interpret the acquired information.	[SU5] implementation of a problem task
Subject contents	1. Visualization of oceanographic data (Ocean data View program). 2. Spatial and temporal variability of salinity, temperature and density of seawater. Thermocline and halocline. 3. T-S diagrams. Water masses. 4. Vertical stability of water masses, Väisälä-Brunta parameter. 5. Mixing, differential diffusion of heat and salt, salt fingers. Turner's angle. 6. Sound propagation in the sea. Sound channel. Wind currents, Ekman theory, upwelling and downwelling. 7. Geostrophic currents. Dynamic method. 8. Wind waves.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	reports from exercises, colloquium	51.0%	100.0%
Recommended reading	Basic literature	1. Talley i in., 1996, Descriptive Physical Oceanography. An Introduction, Elsevier, https://booksite.elsevier.com/DPO/. 2. 	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Using data from World Ocean Atlas 2018: 1. Prepare vertical graphs of temperature T(z) and salinity S(z) for three selected stations (A, B, C) located along a given longitude in a given season (or month). Label the profiles of individual stations with the letters: A, B and C. 2. Prepare contour maps of temperature T and salinity S at the sea surface (z = 0) in a given area in a given season (or month).		
Work placement	Not applicable
