

Subject card

Subject name and code	Physics - laboratory classes , PG_00092774						
Field of study	Marine Hydrography						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		1.0		
Learning profile	practical		Assessment form		credit		
Conducting unit	Laboratory of Physical Oceanography -> Department of Physical Oceanography and Climate Research -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Jordan Badur				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15
	E-learning hours included: 0.0						
	eNauczanie source addresses: Moodle ID: 13488 ATC-WOiG-HYDR-INZ35DZ-(2025/2026)- Fizyka laboratorium niepewności pomiarów https://mdl.ug.edu.pl/course/view.php?id=13488						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		3.0		12.0	30
Subject objectives	1. Familiarization with basic processes and phenomena in Physics, their laws and research methods, using measurement techniques 2. Transfer of knowledge and development of skills necessary for effective learning in subsequent courses on marine physics and hydrography in terms of measurement techniques necessary for setting up and performing experiments in Physics and Hydrography						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[HML3-K02] correctly determine the priorities in professional work for the implementation of a task specified by himself/ herself or others	Students have the ability to complete assigned tasks in a timely manner.	[SK5] implementation of a problem task
	[HML3-K01] correctly identify and resolve professional dilemmas, especially in the aspects of security and entrusted property	Students ensure the safety of both individuals and equipment during laboratory sessions.	[SK8] observation of student's independent or team work
	[HML3-U18] work individually and in team, manage the work of the team, in particular comply with health and safety regulations and ergonomics	Students work together during experiments, conscious of their responsibility for the tasks they perform.	[SU5] implementation of a problem task [SU6] demonstration of practical skills
	[HML3-U08] independently use the professional literature available in traditional and electronic form, make an assessment, critical analysis and synthesis as well as the correct interpretation of the information obtained	Students are able to collect information on the phenomena underlying the experiment.	[SU1] oral statement/conversation/discussion [SU5] implementation of a problem task
	[HML3-W01] selected facts, phenomena and processes, as well as methods and theories concerning them, explaining the complex relationships between them, constituting basic general knowledge in the field of scientific disciplines forming the theoretical foundations specific to the field of study	Students have deep knowledge and understanding of the phenomena underlying the experiment.	[SW1] oral statement/conversation/discussion [SW5] implementation of a problem task
	[HML3-W03] directions of development and the latest discoveries in the field of scientific disciplines forming the theoretical basis appropriate to the field of study	Students are familiar with recent paradigms in the theory of measurements in Physics.	[SW5] implementation of a problem task
	[HML3-U19] plan and implement independent learning and improvement of his/her professional competences	Students are capable of planning self-study sessions.	[SU1] oral statement/conversation/discussion [SU5] implementation of a problem task
	[HML3-U14] use the applicable terminology in presenting and discussing problems related to the field of study	Students demonstrate fluency in the use of terminology and methods of Physics relevant to the experiment performed.	[SU1] oral statement/conversation/discussion
	[HML3-U01] plan and conduct experiments, including computer simulations, interpret the results obtained and draw conclusions	Students have the ability to plan and conduct experiments, utilizing basic statistical methods to analyze and interpret the collected data.	[SU5] implementation of a problem task [SU6] demonstration of practical skills
	[HML3-W04] the issue of measurements related to the exploration of sea basins and inland waters and tools allowing to describe, interpret and present the results of measurements	Students are acquainted with the methods of conducting experiments in Physics, as well as with the tools used in the process.	[SW1] oral statement/conversation/discussion [SW5] implementation of a problem task
Subject contents	The theory of laboratory measurement, measurement uncertainty and statistical data analysis. Students will conduct experiments on selected topics from mechanics, heat and the macroscopic properties of materials.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	graded laboratory report	51.0%	60.0%
	graded preparation for class	51.0%	40.0%
