Subject objectives	Developing knowledge on methods of inventory and natural valorization of coastal and marine areas, predicting the effects of human impact on the functioning of marine biotopes, and search for solutions to reduce the negative impact of the of the planned project on the marine environment						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	OCEANL3-W05		Has advanced knowledge of research techniques and methods used to inventory and valorize the natural components of the marine environment		[SW4] test/exam - oral or written		
	OCEANL3-W06		Has advanced knowledge of the principles of biotic resource management and the consequences of marine ecosystem imbalance		[SW4] test/exam - oral or written		

Subject contents	Objectives and methods of inventory and natural valuation of the marine environment, valuation criteria (among others, key areas and species, value of species and habitats for marine ecosystems). Legal aspects, among others, areas and species protected by national and international law.Assessment of the impact of various uses of marine areas (including offshore wind farms, ports and other structures, storage, mining, tourism) on marine biotopes.Predicting the effects of human impact on the environment. Assessment of the impact of investments on the environment - forecasts and reports
