

Subject card

Subject name and code	Principles of marine invertebrates biology - laboratory exercises, PG_00118067						
Field of study	Oceanography						
Date of commencement of studies	October 2025		Academic year of realisation of subject			2026/2027	
Education level	Bachelor's studies		Subject group			Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study	
Mode of study	full-time studies		Mode of delivery			at the university	
Year of study	2		Language of instruction			Polish	
Semester of study	4		ECTS credits			3.0	
Learning profile	academic		Assessment form			credit	
Conducting unit	Department of Marine Ecosystems Functioning -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Luiza Bielecka				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	45.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		9.0		36.0	90
Subject objectives	To familiarize the student with the biology and ecology of marine invertebrates, the diversity of these animals, the specific structure of their bodies, including basic identification features used to recognize animals at various taxonomic levels and features indicating adaptations to the environment. Acquiring skills in taxonomic identification of marine invertebrates.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	OCEANL3-U04	Is able to independently search for information in Polish and English-language specialist literature, as well as in the Internet and databases regarding issues related to the biology and ecology of marine invertebrates (program content)	[SU4] test/exam - oral or written [SU8] observation of student's independent or team work
	OCEANL3-U01	Can use scientific terminology fluently and appropriately in presenting and discussing problems in the field of oceanography with particular emphasis on the biology and ecology of marine invertebrates	[SU1] oral statement/conversation/discussion [SU4] test/exam - oral or written
	[OCEANL3-K05] is willing to take responsibility for the safety of his/her own and others' work, is aware of the risks and threats resulting from the work performed	Is willing to take responsibility for the safety of his/her own and others' work, is aware of the risks and threats resulting from the work performed in laboratory	[SK8] observation of student's independent or team work
	OCEANL3-W01	Knows and understands in-depth specialized terminology used in oceanography and related sciences (in Polish, English and/or Latin) with particular emphasis on the biology and ecology of marine invertebrates	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion
	OCEANL3-W07	Knows and understands the basic principles of occupational health and safety as an oceanographer with a biological specialization	[SW5] implementation of a problem task
	OCEANL3-W05	Knows at an advanced level techniques, research methods and tools used for identification analyzes of marine invertebrates in order to describe and interpret phenomena and processes occurring in the marine environment	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion [SW5] implementation of a problem task
Subject contents	A detailed review of selected marine invertebrate taxa, starting from Protista through the main taxonomic groups, with particular emphasis on the fauna of the Baltic Sea. roscopic and microscopic analysis of marine invertebrates occurring in various water bodies and belonging to various ecological formations. Identification and classification of animals based on detailed biological analysis (specific diagnostic features, body shape and structure, body coverings, features related to lifestyle, way of moving, eating, place of living) to the level of lower taxonomic categories, including the recognition of sexual dimorphism features) .		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	activity and completion of tasks during laboratory exercises	51.0%	40.0%
	test I	51.0%	30.0%
	test II	51.0%	30.0%
