

Subject card

Subject name and code	Regional Oceanography - Case Studies, PG_00117749						
Field of study	Oceanography						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Master's studies		Subject group		Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		5.0		
Learning profile	academic		Assessment form		credit		
Conducting unit							
Name and surname of lecturer (lecturers)	Subject supervisor		dr Anna Panasiuk				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	60.0	0.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		10.0		50.0	120
Subject objectives	Improving the ability to acquire, analyze available data and interpret them based on the latest scientific reports. Developing the ability to express opinions, on scientific topics, supported by argumentation.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OCEANMU2-K01] is ready to plan, implement and supervise, individually or collectively, next stages of the entrusted task, is ready to take responsibility for its results, cooperates effectively in the team and performs its functions in it various functions, including managerial ones	Students can work and cooperate in a team by actively assuming different roles, including the role of a leader	[SK1] oral statement/conversation/discussion [SK2] presentation/project/paper/report [SK8] observation of student's independent or team work
	[OCEANMU2-U08] is able to prepare a study of a given issue/problem in Polish and a selected foreign language in written form (short scientific text, documented research work) and orally (paper, presentation) and discuss with specialists on topics related to oceanographic issues, with particular emphasis on the studied specialty	Students proficiently communicate in English, including the use of professional terminology	[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report
	[OCEANMU2-W03] knows and understands research methods used in oceanography and related sciences	student knows and deeply understands the research methods used in oceanography	[SW1] oral statement/conversation/discussion [SW2] presentation/project/paper/report [SW3] text preparation/written work
	[OCEANMU2-W02] knows and understands complex processes and phenomena occurring in the marine environment, with particular emphasis on the coastal zone, as well as complex relationships between living and non-living elements of the aquatic environment	Student has a deep knowledge and understanding of the complex physical, biological, chemical and geological phenomena, and the natural processes taking place in marine environment and the coastal zone; students can explain and analyze the interrelations among the phenomena and processes that occur in the marine environment	[SW1] oral statement/conversation/discussion [SW2] presentation/project/paper/report [SW3] text preparation/written work
	[OCEANMU2-U09] can take part in a discussion/debate using substantive arguments, has the ability to formulate opinions based on scientific knowledge and experience and creating synthetic summaries	Students can synthesize and analyze their own opinions and those of other authors	[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report [SU3] text preparation/written work
Subject contents	The course will explore the recent literature highlighting various aspects of marine systems, e.g.: - the geology, processes, and paleo-archives hidden beneath the worlds oceans, - biogeochemical cycling of elements and alterations in ocean and atmospheric chemistry, geoengineering techniques for mitigation of climate change, influence of outdoor and indoor air pollutions on people health and their quality of life in the Baltic Sea region, - physical processes, ocean-atmosphere interactions, elements of numerical modeling, - biological processes, effect of global changes on biota and ecosystem functioning.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	determination of a passing grade on the basis of partial grades received during the semester	51.0%	100.0%
Recommended reading	Basic literature	Publications from scientific journals	
	Supplementary literature	Publications from scientific journals	
	eResources addresses		
Example issues/example questions/tasks being completed			
Work placement	Not applicable		

Document generated electronically. Does not require a seal or signature.
