

Subject card

Subject name and code	From Theory to Execution - Data Science in Business, PG_00177499						
Field of study	Informatics and Econometrics						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Master's studies		Subject group		Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		4.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Department of Econometrics -> Faculty of Management -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Sabina Nowak				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		3.0		52.0	100
Subject objectives	The course aims to present a comprehensive approach to issues related to the use of data and artificial intelligence in project management. It prepares students for the practical management of data-driven projects, from analysis and planning through implementation to project preparation and defense.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[liEMU2_U11] The student can collaborate effectively in teams and assume leadership roles.	The student is able to actively cooperate in a team when preparing a project devoted to the use of data and artificial intelligence in business.	[SU2] presentation/project/paper/report [SU5] implementation of a problem task
	[liEMU2_W03] The student possesses a thorough understanding of how organizations operate, including the complex phenomena, processes, and relationships that exist in their environments and how these impact their functioning.	The student identifies the data management process as a strategic resource of the organization.	[SW2] presentation/project/paper/report [SW5] implementation of a problem task
	[liEMU2_U10] The student is able to convey information transparently and effectively, adapting their communication to meet the needs of different audiences. They can clearly present their opinions and engage in debates using terminology from the fields of econometrics, informatics, or statistics, utilizing various media.	The student is able to formulate opinions, discuss selected aspects and present solutions for data management in the project management process.	[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report
	[liEMU2_K01] The student is ready to acquire and deepen the knowledge needed to solve cognitive and practical problems, in particular in the field of econometrics, informatics or statistics, as well as to evaluate the knowledge and the received content critically and to consult experts in the event of difficulties with solving the problem on their own.	The student is ready to deepen their knowledge of data analysis and machine learning in a business context.	[SK2] presentation/project/paper/report [SK5] implementation of a problem task
	[liEMU2_W09] The student possesses a comprehensive understanding of both traditional and modern entrepreneurship principles.	Students analyze issues in modern entrepreneurship related to data management, AI/ML implementation, organizational transformation, and process optimization.	[SW2] presentation/project/paper/report [SW5] implementation of a problem task
	[liEMU2_U06] Students can utilize structured and detailed knowledge of management, quality sciences, economics, and finance to address dilemmas and develop innovative solutions for complex or unusual problems that arise in professional settings.	The student can manage a project using management, quality sciences, economics, and finance knowledge.	[SU2] presentation/project/paper/report [SU5] implementation of a problem task
Subject contents	1. Introduction to project management. 2. Project management within the field of machine learning. 3. Machine learning and data-driven projects in organizations. 4. Case study analysis of real business cases in artificial intelligence and data-driven fields.		
Prerequisites and co-requisites	Students should have knowledge of business data analysis.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Team project with presentation	51.0%	100.0%
