

Subject card

Subject name and code	Marketing Research, PG_00178112						
Field of study	Informatics and Econometrics						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2027/2028		
Education level	Bachelor's studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		7.0		
Learning profile	academic		Assessment form		exam		
Conducting unit	Department of Statistics -> Faculty of Management -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Kamila Migdał-Najman				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	15.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		4.0		96.0	175
Subject objectives	The student learns the essence and role of marketing research in management. They are able to define its objectives, subject, classification, and stages. They acquire theoretical and practical skills in planning marketing research.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[liEL3_W04] The student has advanced knowledge and understanding of human roles, places, and behaviour in organizations or projects, both as individuals and in group and organizational dimensions.	Student identifies and analyzes the role, position, and behaviors of individuals within organizations and projects, both individually and within group and organizational contexts. Student verifies the impact of these behaviors on the effectiveness of marketing activities and the execution of marketing research. The student defines mechanisms of team collaboration and group dynamics in research processes. He/she analyzes how the behaviors of employees and project participants shape decision-making processes and the outcomes of marketing research. This knowledge is applied to designing and interpreting marketing research, supporting effective adaptation of marketing strategies to customer needs and optimizing the management of research teams.	[SW4] test/exam - oral or written
	[liEL3_W03] Student w zaawansowanym stopniu zna i rozumie rolę, miejsce oraz zachowania człowieka w organizacji lub projektach, zarówno jako jednostki, jak i w wymiarze grupowym oraz organizacyjnym.	The student identifies and analyzes the functioning of an organization as well as the phenomena, processes, and relationships occurring in its environment. They verify their impact on marketing activities and the effectiveness of conducted marketing research. The student lists and defines key elements of the market environment that shape consumer needs and behaviors. They design marketing research that takes these factors into account, analyze and interpret the results, supporting strategic and operational decision-making. Additionally, the student evaluates the effectiveness of marketing research in the context of adapting the organization to changing market conditions.	[SW4] test/exam - oral or written [SW2] presentation/project/paper/report
	[liEL3_U03] Students can obtain data from appropriately selected sources, use these data to solve economic and social problems, and process and interpret them using econometrics, informatics or statistics tools.	Student identifies and verifies reliable sources of economic and social data and analyzes them using advanced econometric, IT, and statistical tools. Designs marketing research, selects data collection methods, analyzes results, and evaluates the effectiveness of applied methods. Formulates recommendations supporting business decisions and optimization of marketing activities.	[SU2] presentation/project/paper/report
	[liEL3_U02] Students can select or construct econometrics, informatics or statistics tools and apply them to describe and solve economic and social problems.	Student identifies, selects, and constructs econometric, IT, and statistical tools used in marketing research. Student analyzes their properties and limitations, verifies their effectiveness in describing and solving marketing problems of economic and social nature. The student designs and applies these tools to analyze marketing data, formulating conclusions that support business decision-making. Additionally, he/she evaluates the appropriateness of the methods used and optimizes the tools to improve the quality of research and analytical results.	[SU2] presentation/project/paper/report

Subject contents	Introduction to Marketing Research: A Modern Approach. The essence and significance of marketing research in contemporary management. Definitions and the evolution of marketing research in the era of digitalization and globalization. The role of research in strategic and operational decision-making in a dynamic business environment. Integration of research with digitalization and automation management processes. Classification and functions of marketing research. Types of research: exploratory, descriptive, causal, as well as research based on big data and predictive analytics. Application of research in key marketing areas: market segmentation, competitive analysis, customer experience (CX), product and digital campaign testing. Examples of implementations in business practice based on large data sets and artificial intelligence. Users and data sources in marketing research. Target groups: managers, marketing and sales departments, business partners, and data analytics teams. Information sources: primary and secondary data, databases, industry reports, social media, e-commerce platforms data, IoT. The importance of data quality and its impact on research reliability and validity. Development and trends in marketing research. A historical overview and the latest trends: big data, AI, machine learning, predictive analytics, automation of research processes. Marketing Information System (MIS) in the digital age: structure, operation, integration with CRM and ERP. The significance of MIS for making fast, data-driven marketing decisions. Organization and stages of marketing research in a modern environment. Stage 1: Research Design. Defining the research problem considering market environment analysis and technological trends. Setting objectives, tasks, and research hypotheses. Modern sampling methods: probabilistic and non-probabilistic techniques, sample selection using algorithms and artificial intelligence. Stage 2: Data Collection. Modern data collection methods: digital surveys, social media monitoring, mobile research, CRM system data analysis. Differences and applications of primary and secondary data, assessing their quality and suitability. Designing questionnaires and research tools using online tools and automation (e.g., chatbots). Factors affecting data quality: accuracy, reliability, minimizing measurement errors through advanced quality control techniques. Stage 3: Data Analysis and Interpretation. Data reduction and visualization techniques (e.g., dashboards, interactive reports). Advanced statistical analysis methods. Interpretation of results considering market context and technological trends. Preparation of research reports tailored to different audiences, emphasizing visual communication and data storytelling.		
Prerequisites and co-requisites	Knowledge of basic concepts in marketing, marketing management, and statistics.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	51.0%	50.0%
	Term project	51.0%	50.0%
