

Subject card

Subject name and code	Programming Essentials, PG_00178476						
Field of study	Informatics and Econometrics						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	part-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		5.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Department of Business Informatics -> Faculty of Management -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Jerzy Auksztol, prof. UG				
	Teachers		mgr Piotr Porzuczek				
			dr hab. Jerzy Auksztol, prof. UG				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	8.0	0.0	24.0	0.0	0.0	32
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	32		2.0		91.0	125
Subject objectives	Mastering computer programming skills, with particular emphasis on the basic constructs of the C# and Python programming languages and related data analysis techniques.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[liEL3_U12] The student can design and implement IT systems to enhance business operations and effectively utilize modern ICT technologies for management and business communication.	The student is able to write programs in C# and Python based on user requirements. The student is able to critically evaluate computer programs in terms of the efficiency of the algorithms and data structures applied.	[SU2] presentation/project/paper/report [SU4] test/exam - oral or written
	[liEL3_W06] To an advanced degree, the student knows and understands the processes and methods of creating, developing, and providing appropriate conditions for using informatics or statistics tools, particularly those that improve human and organizational functioning.	The student knows the principles of object-oriented programming in contrast to structured programming. The student possesses the knowledge required to evaluate which programming paradigm is appropriate for solving a given algorithmic and/or business problem. The student knows mathematical, statistical, and econometric methods applied in programs written in C# and Python.	[SW4] test/exam - oral or written
	[liEL3_U02] Students can select or construct econometrics, informatics or statistics tools and apply them to describe and solve economic and social problems.	The student is able to solve complex algorithmic and business problems using C# and Python. The student is able to design computer programs that solve business problems using an object-oriented approach. The student is able to design computer programs utilizing database technologies.	[SU2] presentation/project/paper/report
Subject contents	A. Lecture topics - discussion of formal languages in relation to syntax, semantics and pragmatics; classification of programming languages according to the paradigm of declarative, functional, logical and object-oriented programming. - algorithms and their formalization - the concept of an algorithm; techniques for its description on the example of algorithms for linear equations, quadratic equations and the greatest common divisor, - numerical systems in computers: binary, octal, decimal and hexadecimal systems; representation of integers and floating-point numbers, - components of declarative programming: data types (basic, arrays, records, files, enumerated and pointer types), variables, operators, expressions, loop and selection instructions; division into modules and subroutines (methods), the body of the subroutine and the method call instruction, passing parameters by value and reference; visibility and lifetime of variables, - components of object-oriented programming in C# and Python: classes, objects, attributes, methods, constructors, destructors, inheritance, encapsulation, abstract classes, interfaces - data structures: doubly linked list; stack; queue; hash table; binary tree, - search and sorting algorithms bubble sort, selection sort, merge sort and quick sort; linear and binary search, - programming techniques: recursion (recursion) on the example of factorial, Fibonacci sequence and Euclid's algorithm; dynamic programming; divide and conquer technique, - selected applications: big data, web scraping, machine learning and text mining. B. Laboratory topics - discussion of formal languages - discussion of the programming environment; writing and running the first program; presentation of the concepts of syntax, semantics and pragmatics, - algorithms and their formalization writing algorithms for linear and quadratic equations using one of the description techniques, - numerical systems and elements of declarative programming implementation of an algorithm for linear and quadratic equations; development of an algorithm and writing a program that performs the mutual exchange of binary, octal, decimal and hexadecimal representations, - data structures development of basic data structures such as: list, binary tree, stack, queue, - search and sorting algorithms implementation of selected sorting and search algorithms, - computational complexity and efficiency comparison of the computational complexity of previously written sorting algorithms, - selected programming techniques development of a factorial and Fibonacci sequence algorithm using recursive and non-recursive techniques, indicating the advantages and disadvantages of each of them, - implementation of selected tasks implementing web scraping, machine learning and text mining.		
Prerequisites and co-requisites	Basic knowledge of high school level mathematics and the ability to use a desktop computer operating system.		

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Colloquium	51.0%	30.0%
	Lecture knowledge test	51.0%	40.0%
	Semester project	51.0%	30.0%
