

Subject card

Subject name and code	Implementing Big Data Solutions, PG_00178741						
Field of study	Informatics and Econometrics						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	Master's studies		Subject group		Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	part-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		5.0		
Learning profile	academic		Assessment form		exam		
Conducting unit	Department of Business Informatics -> Faculty of Management -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Patrycja Krauze-Maślankowska				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	8.0	0.0	24.0	0.0	0.0	32
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	32		2.0		91.0	125
Subject objectives	Familiarizing students with a comprehensive approach to acquiring and processing large data sets.Preparing students to create Big Data solutions.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[liEMU2_U03] The student is able to obtain and verify data from properly selected sources and to collect, process, and visualize it using modern econometrics, informatics or statistics tools.		is able to use advanced forms of large-scale databases		[SU2] presentation/project/paper/report		
	[liEMU2_U12] The student can adapt, design, create, and operate IT systems that support business entities.		is able to design web scraping scripts and open data retrieval		[SU2] presentation/project/paper/report		
	[liEMU2_W05] The student possesses advanced knowledge and understanding of informatics, statistics, and econometrics techniques and tools used to acquire, process, or visualise data to aid in decision-making and verify research hypotheses.		understands the purpose of creating and using Big Data systems		[SW4] test/exam - oral or written		

Subject contents	Lecture Introduction to Big Data, types of data, data division, classifications and technologiesWeb scraping techniques, generic and dedicated web scraping, legal conditions of web scrapingNoSQL databases - collections and documents - creating, saving and downloading dataOverview of Big Data analytical tools, libraries supporting data processingApache Hadoop ecosystemPractical application of Data Mining, Text Mining, Web MiningSupervised and unsupervised machine learning Exercises Web scraping methods - using the Python language to automatically download data from the InternetMachine learning methods - supervised and unsupervised learning, using text and numeric setsText mining methods - automatic extraction of valuable information from text setsCollecting large data sets - NoSQL databases, saving the content of websites, creating and selecting queriesWorking with Open Data data, using APIsProcessing data from various file formats - JSON, CSV and XMLProcessing large sets data in Apache Hadoop and Apache Spark - PySpark application, MapReduce algorithms: WordCount analysis, HDFS - Hadoop Distributed File SystemApplications dedicated to web scrapingCase studies of Big Data solutions implementation		
Prerequisites and co-requisites	Familiarizing students with a comprehensive approach to acquiring and processing large data sets.Preparing students to create Big Data solutions.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Student activity during classes	51.0%	10.0%
	Exam - test	51.0%	30.0%
	Project - Big Data solutions	51.0%	60.0%

Example issues/ example questions/ tasks being completed	Test a test form in the form of open-ended and multiple choice questions, verifying knowledge of theoretical issues related to Big Data. Big Data system project, including collecting and processing large data sets. Student activity during classes points earned for correctly solving the given problem issues.		
Work placement	Not applicable
