

Subject card

Subject name and code	Food chemistry, PG_00080779						
Field of study	Chemical Business						
Date of commencement of studies	October 2026		Academic year of realisation of subject			2028/2029	
Education level	Bachelor's studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	full-time studies		Mode of delivery			at the university	
Year of study	3		Language of instruction			Polish	
Semester of study	5		ECTS credits			3.0	
Learning profile	academic		Assessment form			credit	
Conducting unit	Faculty of Chemistry -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. Jolanta Kumirska				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	45.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		8.0		22.0	75
Subject objectives	To introduce students with information on the chemical composition of food and the structure of the main food raw materials, as well as the functions of nutrients, food additives and other compounds which sharpe the health quality of food products.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[BCHINŻ_U08] Uses the chemical nomenclature and engineering terminology properly.	Student discusses issues related to food chemistry and uses the chemical nomenclature and engineering terminology properly	[SU2] presentation/project/paper/report [SU3] text preparation/written work [SU8] observation of student's independent or team work
	[BCHINŻ_W06] Enumerates basic unit processes and describes issues in the field of technology and chemical engineering.	Student knows the most important food ingredients which influence on the quality of nutritional products; describes their physical, chemical and biological properties. Student explains selected basic transformations occurring during the storage and processing of raw materials and food products.	[SW2] presentation/project/paper/report [SW3] text preparation/written work
	[BCHINŻ_K02] Works individually demonstrating initiative and independence in actions, and effectively cooperates in a team, performing various roles in it.	Student demonstrates responsibility for the safety of her/his own and others' work.	[SK8] observation of student's independent or team work
	[BCHINŻ_K04] Demonstrates responsibility for the safety of her/his own and others' work.	Student demonstrates responsibility for the safety of her/his own and others' work, is careful working with chemical substances, and is prudent working with scientific equipment during laboratory classes.	[SK8] observation of student's independent or team work
	[BCHINŻ_W07] Describes the construction and operating principles of basic scientific, technological and control-measuring apparatus.	Student describes the construction and operating principles of selected control-measuring apparatus used in food chemistry.	[SW2] presentation/project/paper/report [SW3] text preparation/written work
Subject contents	[BCHINŻ_U03] Plans, selects the appropriate research and measuring equipment and performs simple chemical experiments; analyses the results and draws conclusions based on them.	Student follows established procedures during analyses of ingredients raw materials for food production and the quality of food products; analyses the results and draws conclusions based on them.	[SU2] presentation/project/paper/report [SU3] text preparation/written work [SU8] observation of student's independent or team work
	A series of laboratory exercises concentrated on consolidating knowledge and skills in the field of knowledge of the chemical composition of food and physico-chemical transformations occurring in raw materials and food products during their storage and processing.		
	lack		
	Convergent to: organic chemistry, analytical chemistry		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	The grade will be a weighted average of the grades from the final test on all laboratory material (40%), partial tests (40%) and reports. (20%)	51.0%	100.0%
