

Subject card

Subject name and code	Chemistry of pharmaceutical compounds, PG_00080735						
Field of study	Chemical Business						
Date of commencement of studies	October 2026		Academic year of realisation of subject			2028/2029	
Education level	Bachelor's studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	full-time studies		Mode of delivery			at the university	
Year of study	3		Language of instruction			Polish	
Semester of study	6		ECTS credits			2.0	
Learning profile	academic		Assessment form			credit	
Conducting unit	Laboratory of Medical Chemistry -> Department of Biomedical Chemistry -> Faculty of Chemistry -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Marta Spodzieja				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		15.0	50
Subject objectives	- Familiarization of students with the problems pointed out in the content of laboratory course, - Familiarization of students with laboratory technique used in analytical and organic chemistry, in micromolar scale work, - Acquiring the ability to unaided planning of experimental work, performance of chemical analysis and problem solving during their realization.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[BCHINŻ_W06] Enumerates basic unit processes and describes issues in the field of technology and chemical engineering.	student argues judgments based on the collected experimental results and draws conclusions through logical reasoning	[SW2] presentation/project/paper/report
	[BCHINŻ_U05] Evaluates the usefulness and functioning of existing engineering and technical solutions as well as research and measurement methods in the chemical industry.	student carries out a complex synthesis of an organic compound with properties medicinal products using the Polish-language literature procedure	[SU6] demonstration of practical skills [SU8] observation of student's independent or team work
	[BCHINŻ_W05] Describes the life cycle of devices, facilities and technical systems as well as modern environment-friendly technical solutions.	student argues judgments based on the collected experimental results and draws conclusions through logical reasoning	[SW4] test/exam - oral or written
	[BCHINŻ_U02] Uses basic methods, techniques and tools in formulating and solving engineering tasks in the field of chemistry.	student carries out a complex synthesis of an organic compound with properties medicinal products using the Polish-language literature procedure	[SU2] presentation/project/paper/report [SU6] demonstration of practical skills
	[BCHINŻ_K04] Demonstrates responsibility for the safety of her/his own and others' work.	Student retains care during work with substances with putative biological/pharmacological activity	[SK5] implementation of a problem task [SK8] observation of student's independent or team work
	[BCHINŻ_U09] Using the acquired knowledge, skills and various sources of scientific information independently prepares written papers and oral presentations.	student designs paths for distinguishing individual medicinal substances in a series of several compounds belonging to different structural groups	[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report [SU4] test/exam - oral or written [SU6] demonstration of practical skills
	[BCHINŻ_K03] Independently sets or implements a set action plan specifying priorities for its implementation; critically assesses its progress.	student designs paths for distinguishing individual medicinal substances in a series of several compounds belonging to different structural groups	[SK5] implementation of a problem task [SK8] observation of student's independent or team work
Subject contents	[BCHINŻ_U06] Proposes and makes simple devices, operations or unit processes related to the implementation of the technological process used in the chemical industry, taking into account material and energy balances.	student carries out a complex synthesis of an organic compound with properties medicinal products using the Polish-language literature procedure	[SU2] presentation/project/paper/report
	- Preparation of straight therapeutic compounds. Identity analysis of synthesis products. Assessment of purity of obtained compounds. - Identification of active substances in unknown commercially available straight drugs, by qualitative chemical analysis. General methods of identification of therapeutic compounds of selected groups (alkaloids and their derivatives, steroids, tetracyclines, sulfonamides -lactam compounds, aniline and salicylic acid derivatives, barbiturates). - Quantitative analysis of active substance in known straight drug. Determination of amount of the active substance in the single dose of commercially available single-component drug.		
	Finished Organic Chemistry, General Chemistry and Analytical Chemistry courses.		
	- knowledge of a fundamental calculations applied in analytical chemistry, - knowledge of the basic health and safety rules in chemical laboratory, - ability to work with laboratory glass and principal laboratory apparatus applied in chemical synthesis and analysis		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	passing of three tests ((on the synthesis of a medicinal product, on the qualitative analysis of organic ingredients and on the qualitative analysis of selected retail groups)	51.0%	95.0%
	preparation and analysis of the results of each exercise (obtaining a positive grade in the reports is a necessary condition for passing)	51.0%	5.0%
