

Subject card

Subject name and code	Machine Learning, PG_00183838						
Field of study	Machine Learning						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2025/2026		
Education level	Master's studies		Subject group		Optional subject group		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		5.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Department of Business Informatics -> Faculty of Management -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		mgr inż. Dawid Jereczek				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		20.0		60.0	125
Subject objectives	The aim of the course is to introduce students to the basic concepts and techniques related to machine learning, which are widely used in various fields of computer science. Students will acquire skills in designing, implementing and evaluating learning models using a variety of algorithms and tools. The aim of the course is to develop competences in data analysis and the application of machine learning to solve practical problems such as prediction, classification or pattern recognition.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[IiEMU2_W02] The student has an in-depth knowledge of economic structures and institutions, the processes taking place in them, the connections between them and their dynamics, and has an in-depth knowledge of the phenomena and processes taking place in their environment.	the student understands the importance of artificial intelligence, including machine learning, in the functioning of a modern enterprise. Is able to assess how AI affects the optimization of business processes, personalization of marketing activities and improvement of management efficiency.	[SW1] wypowiedź ustna/rozmowa/ dyskusja
	[IiEMU2_K05] The student can think and act in an entrepreneurial manner and flexibly adapt to changing environmental conditions. Thinks creatively and can go beyond the usual patterns.	The student is aware of the key role played by artificial intelligence in making strategic decisions, automating tasks and building a competitive advantage on the market.	[SK1] wypowiedź ustna/rozmowa/ dyskusja [SK2] prezentacja/projekt/referat/ raport
	[IiEMU2_U02] The student is able to proficiently acquire detailed information about economic processes and phenomena through direct observation, planned experimentation or database queries, as well as collect and process it using modern information technology tools.	The student is able to use elements of artificial intelligence in practice to solve a simple problem task.	[SU2] prezentacja/projekt/referat/ raport [SU5] realizacja zadania problemowego [SU6] demonstracja umiejętności praktycznych
	[IiEMU2_U04] The student is able to plan, design, and program information systems at an advanced level, supporting the operation of business entities.	The student is able to propose the use of artificial intelligence to solve a given problem or use a ready-made tool.	[SU2] prezentacja/projekt/referat/ raport [SU5] realizacja zadania problemowego [SU6] demonstracja umiejętności praktycznych
Subject contents	. Definitions of artificial intelligence (AI). Objectives of artificial intelligence. Natural vs. artificial AI.2. Threats associated with artificial intelligence. Requirements for creating and using artificial intelligence.3. Machine learning scheme. Planning activities and making decisions. Division of machine learning methods.4. Artificial neural networks. Types of networks.5. Decision trees.6. Rule-based systems. Fuzzy logic.7. Review of applications of AI methods, machine learning8. Genetic algorithms. Fundamentals and characteristics of genetic algorithms.		
Prerequisites and co-requisites	The student should have a basic understanding of mathematics, including knowledge of linear algebra, calculus, and statistics. Competencies in critical thinking and problem analysis will also be valuable when working on projects related to machine learning.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	final project	51.0%	50.0%
	own work during classes	51.0%	50.0%
