

**Subject card**

<b>Subject name and code</b>	Programming in Finance, PG_00178842						
<b>Field of study</b>	Finance and Accounting						
<b>Date of commencement of studies</b>	October 2026	<b>Academic year of realisation of subject</b>			2027/2028		
<b>Education level</b>	Master's studies	<b>Subject group</b>			Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
<b>Mode of study</b>	part-time studies	<b>Mode of delivery</b>			at the university		
<b>Year of study</b>	2	<b>Language of instruction</b>			Polish		
<b>Semester of study</b>	4	<b>ECTS credits</b>			5.0		
<b>Learning profile</b>	academic	<b>Assessment form</b>			credit		
<b>Conducting unit</b>	Department of Statistics -> Faculty of Management -> Rector						
<b>Name and surname of lecturer (lecturers)</b>	<b>Subject supervisor</b>		mgr Katarzyna Raca				
	<b>Teachers</b>						
<b>Lesson types</b>	<b>Lesson type</b>	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	<b>Number of study hours</b>	8.0	0.0	24.0	0.0	0.0	32
	E-learning hours included: 0.0						
<b>Learning activity and number of study hours</b>	<b>Learning activity</b>	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	<b>Number of study hours</b>	32		2.0		91.0	125
<b>Subject objectives</b>	Learning about the possibilities of using Python programming in finance. Acquiring the skills to create automated formulas for calculations and visualizing financial data.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[FiRMU2_U04] From a finance and accounting perspective, students are able to select and effectively use, adapt, or develop new methods and tools from the fields of management, quality sciences, and economics. They can analyze and forecast economic processes as well as evaluate economic phenomena.	The student is able to select and apply appropriate analytical methods that enable forecasting and evaluation of economic phenomena, using the Python programming language.	[SU2] presentation/project/paper/report
	[FiRMU2_U03] Students can gather data from carefully chosen sources to verify its accuracy. They can then use and present both financial and non-financial information to analyze and evaluate economic processes and phenomena in management and quality sciences, as well as in economics and finance.	The student is able to create data visualizations and interpret the results of conducted analyses using the Python programming language.	[SU2] presentation/project/paper/report
	[FiRMU2_W05] The student possesses a comprehensive understanding of advanced and innovative methods, tools, and techniques for obtaining, utilizing, and analyzing data needed to assess the financial situation of various entities in management, quality sciences, economics, and finance.	The student is able to classify algorithms that enable solving selected problems in the field of finance.  The student is able to list tools that allow for the acquisition of financial data.	[SW2] presentation/project/paper/report
	[FiRMU2_U12] The student can use technologies and IT systems (including advanced ones) to support their professional work in finance and accounting.	The student is able to use advanced methods for acquiring and analyzing financial data using the Python programming language.	[SU2] presentation/project/paper/report
[FiRMU2_U02] The student is able to propose or design suitable solutions, including innovative ones, to complex problems in finance and accounting.	The student is able to create custom functions that facilitate solving problems in the area of finance and accounting, using the Python programming language.	[SU2] presentation/project/paper/report	
Subject contents	<p><b>Programming in Python:</b></p> <p>Integrated Development Environments (IDEs).  Syntax and philosophy of the Python language.  Object types, variables, and basic operations on them (including: lists and dictionaries).  Built-in functions and comparison operators.  Conditional statements and loops.  Defining custom functions.  Creating and managing data frames (pandas library).  Operations on data vectors and matrices (numpy library).  Data preparation for analysis (pandas library).  Introduction to data visualization packages (libraries: matplotlib, plotly, seaborn).  Web scraping and using APIs in Python (libraries: beautiful soup, pandas-datareader).</p> <p><b>Application of Python in Finance:</b></p> <p>Interactive charts for financial data.  Automating the process of downloading financial data.  Building custom functions for calculating financial ratios.  Applying Monte Carlo simulations for financial instrument valuation.</p>		
Prerequisites and co-requisites	The student should have basic knowledge of finance, statistics and linear algebra.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Course project	51.0%	100.0%
