

**Subject card**

<b>Subject name and code</b>	Econometrics, PG_00178164						
<b>Field of study</b>	Informatics and Econometrics						
<b>Date of commencement of studies</b>	October 2026	<b>Academic year of realisation of subject</b>			2027/2028		
<b>Education level</b>	Bachelor's studies	<b>Subject group</b>			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
<b>Mode of study</b>	full-time studies	<b>Mode of delivery</b>			at the university		
<b>Year of study</b>	2	<b>Language of instruction</b>			Polish		
<b>Semester of study</b>	3	<b>ECTS credits</b>			7.0		
<b>Learning profile</b>	academic	<b>Assessment form</b>			exam		
<b>Conducting unit</b>	Department of Econometrics -> Faculty of Management -> Rector						
<b>Name and surname of lecturer (lecturers)</b>	<b>Subject supervisor</b>		dr Sabina Nowak				
	<b>Teachers</b>						
<b>Lesson types</b>	<b>Lesson type</b>	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	<b>Number of study hours</b>	30.0	15.0	30.0	0.0	0.0	75
	E-learning hours included: 0.0						
<b>Learning activity and number of study hours</b>	<b>Learning activity</b>	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	<b>Number of study hours</b>	75		4.0		96.0	175
<b>Subject objectives</b>	Show how the econometric model serves as a measurement tool in economics and finance, and develop an understanding of its limitations.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[liIEL3_W05] Knows and understands the methods, techniques and informatics or statistics tools used to acquire, collect, process and present data in decision-making processes.	The student recognizes different types of financial data, classifies econometric models, and selects methods for estimation and verification.	[SW4] test/exam - oral or written [SW2] presentation/project/paper/report [SW5] implementation of a problem task
	[liIEL3_U07] Can prepare written papers, presentations, and oral speeches on problems in econometrics, informatics, or statistics.	The student cooperates to develop an econometric model and presents it to the group.	[SU2] presentation/project/paper/report [SU5] implementation of a problem task
	[liIEL3_U03] Can obtain data from appropriately selected sources, use these data to solve economic and social problems, and process and interpret them using econometrics, informatics or statistics tools.	The student extracts from different data repositories financial and economic data, both cross-sectional and time-series, with different frequencies, recognizes its correctness, and uses this data to build econometric models.	[SU2] presentation/project/paper/report [SU5] implementation of a problem task
	[liIEL3_U02] Can select or construct econometrics, informatics or statistics tools and apply them to describe and solve economic and social problems.	The student chooses a suitable econometric model to address issues in economics, finance, management, and quality sciences.	[SU2] presentation/project/paper/report [SU5] implementation of a problem task
[liIEL3_U01] Can analyze and interpret social and economic processes and phenomena using knowledge and econometrics, informatics or statistics tools from management and quality sciences, economics and finance.	The student describes, analyzes and interprets economic and financial phenomena using descriptive econometric models.	[SU2] presentation/project/paper/report [SU4] test/exam - oral or written [SU5] implementation of a problem task	
Subject contents	<ol style="list-style-type: none"> <li>1. What is econometrics, and how does it differ from economic modelling? Model forms and the principles of interpreting parameters.</li> <li>2. Classical linear regression model, the numerical and stochastic assumptions, and the consequences of fulfilling or not fulfilling these assumptions. Typical economic hypotheses.</li> <li>3. Ordinary Least Squares method of estimation (OLS). Form and properties of the OLS estimator. Gauss-Markov theorem. Empirical examples of OLS estimation.</li> <li>4. Model verification: economic vs statistical verification; the stages of model verification; the individual and joint significance of structural parameters; including and removing variables; testing of restrictions imposed on parameters. Testing for homoscedasticity, lack of autocorrelation, and normality of the error term distribution. Testing the correctness of model specification and stability of structural parameters. Measures of goodness of fit.</li> <li>5. Estimation of the model in cases where the classical linear regression assumptions are not met: estimation in the case of autocorrelation of error term and heteroscedasticity Generalized Method of Least Squares (GLS). Random explanatory variables (causes of randomness, model verification procedure, examples of model specification with random explanatory variables).</li> <li>6. Modelling of qualitative and cyclical phenomena with dummy variables.</li> <li>7. Dynamic models: general and detailed forms, parameter interpretation, short and long-run multipliers.</li> <li>8. Maximum likelihood method: model verification and hypothesis testing.</li> <li>9. Econometric modelling based on non-stationary time series: definition and different types of nonstationarity, spurious regressions, unit-root testing, model estimation for non-stationary explanatory and explanatory variables.</li> <li>10. Multivariate models: examples of model specification, structural and reduced form, the classification and identification problem, estimation indirect least squares method, two-stage least squares method, and instrumental variables method.</li> </ol>		
Prerequisites and co-requisites	Students should have a solid understanding of consumer and producer market behavior, fundamental market competition models, equilibrium and economic growth concepts, international trade dynamics, as well as capital and money market operations. Additionally, a basic grasp of linear algebra, differential and integral calculus, statistics, and practical data mining skills is necessary.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam with tasks and open questions	51.0%	40.0%
	Credit for laboratories: written test (colloquium) + project	51.0%	30.0%
