

**Subject card**

<b>Subject name and code</b>	Computer Programming, PG_00182290						
<b>Field of study</b>	Physics						
<b>Date of commencement of studies</b>	October 2026	<b>Academic year of realisation of subject</b>			2026/2027		
<b>Education level</b>	Bachelor's studies	<b>Subject group</b>			Obligatory subject group in the field of study		
<b>Mode of study</b>	full-time studies	<b>Mode of delivery</b>			at the university		
<b>Year of study</b>	1	<b>Language of instruction</b>			Polish		
<b>Semester of study</b>	1	<b>ECTS credits</b>			3.0		
<b>Learning profile</b>	academic	<b>Assessment form</b>			credit		
<b>Conducting unit</b>	Division of Surface Physicochemistry and Interfacial Phenomena -> Institute of Experimental Physics -> Faculty of Mathematics, Physics and Informatics -> Rector						
<b>Name and surname of lecturer (lecturers)</b>	<b>Subject supervisor</b>		dr Adrian Kołodziejski				
	<b>Teachers</b>						
<b>Lesson types</b>	<b>Lesson type</b>	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	<b>Number of study hours</b>	0.0	0.0	45.0	0.0	0.0	45
	E-learning hours included: 0.0						
<b>Learning activity and number of study hours</b>	<b>Learning activity</b>	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	<b>Number of study hours</b>	45		0.0		30.0	75
<b>Subject objectives</b>	The aim of the course is to acquire knowledge and skills in programming using a selected high-level language.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[FIZL3_K02] can precisely formulate problems aimed at deepening the understanding of a given topic	<ul style="list-style-type: none"> <li>- The student is able to precisely formulate a computational problem for further analysis.</li> <li>- The student can implement the formulated problem in a selected programming language.</li> <li>- The student can analyze and interpret the results to deepen the understanding of the studied subject.</li> </ul>	<ul style="list-style-type: none"> <li>[SK1] oral statement/conversation/discussion</li> <li>[SK2] presentation/project/paper/report</li> <li>[SK5] implementation of a problem task</li> <li>[SK6] demonstration of practical skills</li> <li>[SK8] observation of student's independent or team work</li> </ul>
	[FIZL3_W12] knows the methods of numerical analysis, knows at least one package for symbolic calculations at an advanced level, knows application software packages for presentation of results and data analysis; knows one programming language fluently	<p>Student:</p> <ul style="list-style-type: none"> <li>- has knowledge of structured and object-oriented programming in a selected high-level language (Python)</li> <li>- knows data types, control statements, arithmetic and logical operators in Python;</li> <li>- understands object-oriented programming concepts and can apply them in practical tasks;</li> <li>- knows and can use computational packages and tools for symbolic calculations;</li> <li>- knows and can use user software packages for data analysis and results presentation.</li> </ul>	<ul style="list-style-type: none"> <li>[SW1] oral statement/conversation/discussion</li> <li>[SW2] presentation/project/paper/report</li> <li>[SW5] implementation of a problem task</li> </ul>
[FIZL3_U12] can write, compile, run, test and document a computer program written by himself	<ul style="list-style-type: none"> <li>- The student can formulate a simple numerical algorithm to solve a given problem.</li> <li>- The student can write and run a computer program in Python, processing numerical and text data.</li> <li>- The student can apply structured and object-oriented programming approaches to develop programs ready for testing and documentation.</li> <li>- The student can write a program that reads from and writes to alphanumeric files.</li> <li>-The student can test a program, identify and correct errors, and prepare documentation describing the program's functionality.</li> </ul>	<ul style="list-style-type: none"> <li>[SU1] oral statement/conversation/discussion</li> <li>[SU2] presentation/project/paper/report</li> <li>[SU5] implementation of a problem task</li> <li>[SU6] demonstration of practical skills</li> <li>[SU8] observation of student's independent or team work</li> </ul>	
Subject contents	<ol style="list-style-type: none"> <li>1. Introduction to Python and the Spyder IDE.</li> <li>2. Data types, arithmetic and logical operators, conditional and control statements.</li> <li>3. Complex data types: lists, tuples, dictionaries.</li> <li>4. Procedural programming: functions, modules, basic work with packages.</li> <li>5. Reading from and writing to alphanumeric files.</li> <li>6. Elements of object-oriented programming: classes, objects, methods.</li> <li>7. Basics of computational and data visualization packages.</li> </ol>		
Prerequisites and co-requisites	Basic knowledge of mathematics and physics, ability to use a computer and think logically, and readiness for self-directed learning and developing programming skills.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	homework	0.0%	20.0%
	completing programming tasks during the semester	51.0%	80.0%

Recommended reading	Basic literature	<p><b>A.1. Used during classes:</b></p> <ul style="list-style-type: none"> <li>• Instructions and materials provided by the instructor.</li> </ul> <p><b>A.2. Recommended for self-study:</b></p> <ul style="list-style-type: none"> <li>• Eric Matthes, <i>Python Crash Course, 3rd Edition</i>, No Starch Press, 2022.</li> <li>• Al Sweigart, <i>Automate the Boring Stuff with Python</i>, No Starch Press, 2019.</li> <li>• Mark Reed, <i>Python Programming for Beginners</i>, Independently Published, 2022.</li> <li>• Python Documentation: <a href="https://docs.python.org/3/">https://docs.python.org/3/</a></li> <li>• Online materials on computational and data visualization packages, e.g., NumPy and Matplotlib.</li> </ul>
	Supplementary literature	R. Johansson, <i>Numerical Python: Scientific Computing and Data Science Applications with Numpy, SciPy and Matplotlib</i> . apress 2024
	eResources addresses	
Example issues/ example questions/ tasks being completed	<p>Write a Python program that:</p> <ol style="list-style-type: none"> <li>1. Reads experimental measurement data from a CSV file (e.g., time, temperature, voltage).</li> <li>2. Performs basic data analysis: calculates mean values, standard deviations, minimum and maximum values for each column.</li> <li>3. Creates plots showing relationships between the data (e.g., temperature vs. voltage).</li> </ol>
