

Subject card

Subject name and code	Sea floor geology - lecture, PG_00191287						
Field of study	Geology						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2027/2028		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			2.0		
Learning profile	academic	Assessment form			exam		
Conducting unit	Laboratory of Marine Geology -> Department of Chemical Oceanography and Marine Geology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Ewa Szymczak				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		1.0		19.0	50
Subject objectives	The aim of the course is to learn and understand the geological processes responsible for the evolution of the oceans and the geological structure of the oceanic crust, the morphological structure of the world ocean floor and the types of bottom sediments and their patterns of occurrence. Students will also learn about the methods of ocean floor exploration, the scientific programmes under which oceanic crust research is carried out and the major achievements of the ocean drilling programme. The post-glacial evolution of the Baltic Sea will be presented.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GEOLL3_U05] can reconstruct the history of geological development of selected regions in Poland and in the world on the basis of maps, cross-sections and exposures in the field	is able to use source materials (maps, diagrams, cross-sections) to correctly describe the morphology and characteristics of the bed, sediments and reconstruct the course of geological processes	[SU1] oral statement/conversation/discussion [SU4] test/exam - oral or written
	[GEOLL3_U02] has the skill of analytical and synthetic way of reasoning leading to correct inference based on the results obtained or the facts presented	is able to describe the causes, course and effects of geological processes on the basis of their knowledge and the results obtained or facts presented	[SU1] oral statement/conversation/discussion [SU4] test/exam - oral or written
	[GEOLL3_W02] knows and understands the terminology appropriate in science and natural sciences	use the terminology used in marine geology and used to describe geological processes in the seas and oceans	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion
	[GEOLL3_W04] knows and understands phenomena and processes occurring in the past and today in the interior of the Earth and on its surface, defines the methods of how to study them	characterise the geological processes accompanying the evolution of the seas and oceans, define the methods for studying them and reconstruct the history of geological development	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion
[GEOLL3_W01] knows and understands the basic natural phenomena and explains their course in relation to geological processes	explains the connection between physical, chemical and biological and geological processes within the oceanic crust (including sedimentary cover) and in the marine environment	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion	
Subject contents	History of ocean floor research and contemporary research programmes. The formation of modern oceans and the geological development of their substrates. Structure of the oceanic crust. Forms of ocean basin floor topography and their relationship to geological processes. Inflow of sedimentary material to the seas and oceans. The regularities of spatial distribution of sediments in the ocean. Marine sediments and their rate of sedimentation. The geological history of the Baltic Sea.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	written exam	51.0%	100.0%

	eResources addresses	

Example issues/ example questions/ tasks being completed	Describe the types of oceanic basalts and the criteria for distinguishing them. Name the main morphological units of the oceans. Compare the active and passive marginal edges of the ocean. Characterise the distribution of biogenic sediments, identify factors influencing their distribution.
Work placement	Not applicable

Document generated electronically. Does not require a seal or signature.
