

Subject card

Subject name and code	Virology lab, PG_00153616						
Field of study	Biotechnology						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	Master's studies	Subject group			Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			2.0		
Learning profile	academic	Assessment form			credit		
Conducting unit	Intercollegiate Faculty of Biotechnology UG-MUG -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Alicja Chmielewska				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	5.0		15.0	50	
Subject objectives	The aim of the course is to learn techniques used in molecular virology laboratory. The student will learn methods of animal cell culture, methods of virus propagation, detection, and quantification, use of genetically modified viruses encoding fluorescent proteins. The student will acquire the skills to operate equipment used in a virology laboratory. The student will gain competencies for teamwork during experimental work and will learn the principles of work safety and the hazards in a virology laboratory.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[BIOTECHMU2_U01] The graduate possesses the skills necessary to design and conduct laboratory research, critically assessing risks, method limitations, and ethical implications of undertaken activities.	Possesses the necessary skills to work in a molecular virology laboratory; can plan and perform experiments based on transduction, viral infection, or detection of viral infection; documents activities and results; uses molecular virology tools under the supervision of a mentor in laboratory work; has the ability to operate equipment used in a virology laboratory (laminar flow hood, inverted microscope, fluorescence microscope, multichannel pipettes, automatic pipettors); uses safety and rules; understands the risks associated with working in a virology laboratory			[SU2] presentation/project/paper/report [SU3] text preparation/written work [SU8] observation of student's independent or team work		
	[BIOTECHMU2_K02] The graduate possesses competences to collaborate in the implementation of research work and work in a team.	Actively collaborates with a team conducting experiments in the field of molecular virology			[SK8] observation of student's independent or team work		

Subject contents	The content of this laboratory course covers techniques used in the work with viruses and viral vectors. The tasks will encompass sterile and safe work with cell cultures and model viruses (bovine herpesvirus, baculovirus - nonpathogenic to humans). Students will learn in vitro cell culture, virus propagation and quantification (observation of cytopathic effect, virus titration using TCID50, microscopic observations of fluorescent viruses, immunohistochemical staining of infected cells. There will also be presented health and safety rules in a virology laboratory, including hazards of working with pathogenic organisms and GMOs.		
Prerequisites and co-requisites	Knowledge of basic methods for working with animal cell cultures.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Class activity, team work	51.0%	25.0%
	Class preparation	51.0%	25.0%
	Report	51.0%	50.0%
