

Subject card

Subject name and code	Statistics in Geography - lecture, PG_00193790						
Field of study	Geography						
Date of commencement of studies	October 2026		Academic year of realisation of subject		2026/2027		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	academic		Assessment form		exam		
Conducting unit							
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. Mirosław Miętus				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	20.0	0.0	0.0	0.0	0.0	20
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	20		2.0		28.0	50
Subject objectives	The lectures will provide basic knowledge of the basics of descriptive statistics to a degree that will allow you to understand the content of lectures given in the further course of study, as well as to perform the calculations necessary to carry out tasks in both physical and socio-economic geography.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[GEOGRL3-U04] can apply field and laboratory methods and research tools, spatial analysis methods, and methods of presenting research results in the field of geography, assess their usefulness for tasks in which the application goal of geography can be realized		is able to apply methods and research tools in the field of geographic sciences and evaluate their suitability for the implementation of tasks in which the application goal of geography can be realized curricular content: 1-4		[SU4] test/exam - oral or written		
	[GEOGRL3-W06] knows advanced methods of acquiring, processing, and compiling geographic environmental data, as well as methods of analyzing and interpreting such data		knows and understands to an advanced degree the methods and principles of developing data on the natural and anthropogenic environment, as well as methods of their analysis and interpretation, program content: 1 - 10		[SW4] test/exam - oral or written		
Subject contents	1. Introductory Topics - Concepts and Methods of Statistics, Applications of Statistics; Stages of Statistical Research; Basic Terminology; Measurement Scales. 2. Data Preparation and Transformation; Descriptive Statistics: Measures of Central Tendency. 3. Measures of Dispersion, Characteristic and Probability Distributions. 4. Testing Statistical Hypotheses (Formulating Hypotheses, Significance Level, Types of Statistical Tests); Interval Estimation. 5. Linear Regression (Estimating and Interpreting Function Parameters, Assessing Goodness of Fit, Testing the Significance of the Regression Coefficient) and Correlation (Pearson's Linear Correlation Coefficient and Testing its Significance; Spearman's Rank Correlation Coefficient and Testing its Significance); Estimating and Interpreting Trend Function Parameters; Multiple Regression.						
Prerequisites and co-requisites							

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	activity during lecture	51.0%	5.0%
	test	51.0%	95.0%
Recommended reading	Basic literature	Makać W., Urbanek-Krzysztofiak D., 2004. Metody opisu statystycznego. Wyd. UG, Gdańsk. Balicki A., Makać W., 2010, Metody wnioskowania statystycznego, Wyd. UG, Gdańsk

	eResources addresses		
	Example issues/ example questions/ tasks being completed	Determine the basic sample statistics. Calculate the probability given that variable x meets the criteria for a normal distribution. Determine the confidence interval for the sample mean given the known variance and significance level. Determine the change in characteristic y over time given the linear trend equation. Verify the null hypothesis of statistical significance of the correlation coefficient between two characteristics, given the alternative hypothesis of no significance.	
Work placement	Not applicable
