

Subject card

Subject name and code	Geoecology - laboratory, PG_00193877						
Field of study	Geography						
Date of commencement of studies	October 2026		Academic year of realisation of subject		2028/2029		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		1.0		
Learning profile	academic		Assessment form		credit		
Conducting unit	Division of Landscape and Environmental Studies -> Institute of Socio-Economic Geography and Spatial Management -> Faculty of Social Sciences -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Barbara Korwel Lejkowska				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	10.0	0.0	0.0	10
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	10		2.0		13.0	25
Subject objectives	Introducing measures and methods for analyzing landscape structure and the relationships between landscape elements and the functioning of natural systems.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GEOGRL3-K03] is prepared to social action, including cooperation to preserve the ecological balance and protect the Earth's resources and its sustainable development, using forms of own entrepreneurship for this purpose	students should identify situations and problems related to ecological balance and be able to critically evaluate methods and forms of spatial development consistent with sustainable development.	[SK2] presentation/project/paper/report
	[GEOGRL3-U05] can use scientific language and express opinions and discuss topics related to geography in Polish and a foreign language	students should know and be able to apply basic terms from the field of geoecology that are relevant to the topic	[SU2] presentation/project/paper/report [SU4] test/exam - oral or written
	[GEOGRL3-U03] can plan and conduct, independently and as part of a team, simple research in the field of geography under the supervision of a scientific advisor, based on the necessary information from professional literature and other sources	students should be able to apply appropriate substantive solutions, using qualitative and quantitative methods based on spatial data sources and professional literature	[SU2] presentation/project/paper/report
	[GEOGRL3-W05] knows the interactions between the natural and anthropogenic environments on various spatial and temporal scales, with particular emphasis on the processes and phenomena occurring in the area of the South Baltic Coast and Lake District and the conditions of these interactions	students should identify the basic processes and phenomena occurring in the natural environment and the interactions between the components and elements of the environment and anthropogenic elements	[SW4] test/exam - oral or written [SW2] presentation/project/paper/report
	[GEOGRL3-W04] has advanced knowledge of the Earth's geographical environment, understood as a unified system of interconnected and interacting components; its diversity, functioning, and dynamics of change, including the interaction of environmental components in the area of the South Baltic Coast and Lake District	students should be familiar with the concept of the environment, its structure and functioning, in particular the relationships between its components	[SW4] test/exam - oral or written
Subject contents	• Learning basic terms in geoecology • Learning the basic methods of landscape structure analysis: the geocomplex method, analysis of landscape contrast and selected indicators (including abundance, area, relationship); -multi-stage project • Model of patches, matrices, and corridors basics of the concept and an attempt to determine units based on a topographic map and other sources		
Prerequisites and co-requisites	Ability to use GIS software (QGIS, ARCGIS, or MapInfo) and basic Office programs (Word, Excel), ability to read maps and interpret aerial photographs		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test	51.0%	39.0%
	project 2 (patches-corridors-matrix)	51.0%	28.0%
	project 1 (geocomplex method)	51.0%	33.0%
