University of Gdańsk

Subject card

Subject name and code	Satellite Oceanography - lecture, PG_00198883		
Field of study	Marine Hydrography		
Date of commencement of studies	October 2026	Academic year of realisation of subject	2029/2030
Education level	Bachelor's studies	Subject group	Obligatory subject group in the field of study Optional subject group
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	4	Language of instruction	Polish
Semester of study	7	ECTS credits	1.0
Learning profile	practical	Assessment form	credit
Conducting unit	Laboratory of Physical Oceanography -> Department of Physical Oceanography and Climate Research -> Faculty of Oceanography and Geography -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	dr Katarzyna Bradtke	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	0.0	0.0	0.0	15

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	15	1.0	9.0	25

Subject objectives

Introducing students to aspects of oceanography that can be investigated from a satellite perspective, including remote sensing techniques, with particular emphasis on microwave techniques, satellite databases, and methods for their processing and analysis

Learning outcomes

Course outcome	Subject outcome	Method of verification
[HML3-W03] knows and understands, at an advanced level, directions of development and the latest discoveries in the field of scientific disciplines forming the theoretical basis appropriate to the field of study	knows and understands the directions of development and the latest discoveries in the use of satellite observation techniques and image analysis in marine hydrography	[SW4] test/exam - oral or written
[HML3-K02] is ready to correctly determine the priorities in professional work for the implementation of a task specified by himself/ herself or others	is ready to correctly determine priorities and effectively organize work when carrying out practical tasks related to the use of satellite data in the work of a hydrographer	[SK1] oral statement/conversation/ discussion
[HML3-W04] knows and understands, at an advanced level, the issue of measurements related to the exploration of sea basins and inland waters and tools allowing to describe, interpret and present the results of measurements	knows and understands at an advanced level the methods, techniques and research tools used in physical research of seas and oceans using satellite techniques	[SW4] test/exam - oral or written

Subject contents	1. Satellite techniques used in Earth Observation. Basic concepts of satellite remote sensing. 2. Spatial and temporal scales of marine phenomena. Applications and limitations of satellite remote sensing in monitoring: - large-scale Phenomena (e.g., ice cover in polar regions, El Niño) - mesoscale and submesoscale Phenomena (e.g., eddies, fronts, coastal upwelling, internal waves) - aquatic productivity (types 1 and 2 waters) - coastal zones (bathymetry, river plume extent, shoreline changes) - potential hazards (oil spills, iceberg trajectories, anthropogenic atmospheric pollution). 3. Satellite data in temporal trend analysis and ecohydrodynamic modeling 4. Operational earth observation programs. Overview of sensors and available data for Marine Areas and coastal zones (parameters, temporal and spatial resolution). 5. Synergy of data from different satellite systems. Methods for assessing satellite data quality. Filtering, transforming and classification methods for image data analysis.
Prerequisites and co-requisites	Knowledge of the basics of satellite remote sensing and GIS
Assessment methods and criteria	Subject passing criteria: — Passing threshold: 50.0% Percentage of the final grade: 100.0%
Recommended reading	**Basic literature** • Robinson I., 2010. Discovering the Oceans from Space: The unique applications of satellite oceanography, Springer-Verlag, Berlin and Heidelberg • Emery W., Camps A., 2017, Introduction to Satellite Remote Sensing. Atmosphere, Ocean, Land and Cryosphere Applications, Elsevier **Supplementary literature** • Berizzi F., Martorella M., Giusti E., 2016, Radar Imaging for Maritime Observation, CRC Prss, Taylor & Francis Group 348 s. • Martin S., 2004, An introduction to Ocean Remote Sensing, Cambridge University Press, 426 s. • Chapman R., Gasparovic R., 2022, Remote sensing physics: an introduction to observing earth from space, Wiley, Hoboken USA, 468 ss. • Chang N.-B., Bai K., 2018, Multisensor data fusion and machine learning for environmental remote sensing, CRC Press, Boca Raton, 508 ss. **eResources addresses**
Example issues/ example questions/ tasks being completed	Assessment criteria: Knowledge of • physical processes occurring in the sea that can be studied using satellite methods • satellite techniques used to study specific processes in the sea sea • surface properties that enable remote detection of the phenomena discussed in the lecture • satellite data processing stages necessary to obtain specific environmental information from satellite data • spatial data analysis methods used in the analysis of satellite data in oceanography
Work placement	Not applicable

Document generated electronically. Does not require a seal or signature.
