

Subject card

Subject name and code	Palaeoecology with the elements of Archaeobotany, PG_00200210						
Field of study	Archaeology						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2028/2029		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			3.0		
Learning profile	academic	Assessment form			exam		
Conducting unit	Institute of Archaeology -> Faculty of History -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Joanna Świąta-Musznicka				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		43.0	75
Subject objectives	To provide knowledge on research methods for reconstructing changes in the natural environment in the past, including bio-indicative methods used in the context of settlement studies. To provide knowledge on climate and vegetation changes in the Quaternary period (characterisation of the natural environment at the end of the last glaciation and in the Holocene and the role of settlement). To provide knowledge about the history of human use of plants in the past. To develop knowledge of the conditions for effective cooperation with natural scientists at archaeological sites.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[ARCHL3_W06] Knows and understands at an advanced level the most important theories, research methods and tools of the archaeology workshop	Characterises the research methods and tools of the palaeoecologist and archaeobotanist's workshop to enable effective work on an archaeological site.	[SW4] test/exam - oral or written [SW1] oral statement/ conversation/discussion
	[ARCHL3_W01] Has knowledge of and understands selected facts, objects, and phenomena in the field of archaeology, as well as the basic theoretical approaches used to explain the relationships between them. The graduate therefore possesses fundamental general knowledge in the humanities	Knows and understands the chronology and periodisation of the Polish lands, as well as theories explaining the influence of climate change and vegetation changes on the development of settlement in Poland and Europe.	[SW4] test/exam - oral or written [SW1] oral statement/ conversation/discussion
	[ARCHL3_U04] Can take part in a debate – present and evaluate various opinions and positions and discuss them using correctly professional terminology in the field of archeology	Discusses with palaeoecologists and archaeobotanists the problems of environmental research on archaeological and natural sites.	[SU1] oral statement/conversation/ discussion
[ARCHL3_U08] Can independently plan and implement his/her own lifelong learning	Be able to formulate research problems independently in the context of collaboration with a palaeoecologist and archaeobotanist.	[SU1] oral statement/conversation/ discussion [SU4] test/exam - oral or written	
Subject contents	An overview of palaeoecological methods. Principles of bioindication in natural environment reconstructions. Lithological description and physico-chemical analyses of sediments as a source of information on the past environment. Genetic and non-genetic classifications of sediments. Absolute dating. Basics of dendrochronology. Reconstructions of environmental change based on interdisciplinary studies. Climate and vegetation change in the late Vistulian and Holocene against the background of Iversen's theory of climatic-edaphic cycles. Record of human activity and the nature of the economy in pollen diagrams and palynological anthropogenic indicators. Natural conditions of prehistoric settlement. Anthropogenic changes of the environment under the influence of the activity of prehistoric cultures in Pomerania. Aims and methodology of archaeobotanical research. Tafonomic processes and types of fossilisation of plant remains. Reconstructions of elements of the economy based on palaeoecological and archaeobotanical data. Cultivated and wild- collected plants in the prehistoric and medieval economy. Archaeobotanical research in urban areas.		
Prerequisites and co-requisites	Course pass: Elements of Earth Sciences in Archaeology. Knowledge of earth sciences at high school level, knowledge of Quaternary stratigraphy, knowledge of the most important methods of absolute dating.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	oral exam	51.0%	100.0%
