University of Gdańsk

Subject card

Subject name and code	Biotechnology of Reproduction and Rearing of Cultivated Invertebrates - laboratory classes, PG_00201269		
Field of study	Aquaculture – Business And Technology		
Date of commencement of studies	October 2026	Academic year of realisation of subject	2028/2029
Education level	Bachelor's studies	Subject group	Obligatory subject group in the field of study Subject group related to practical vocational preparation
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	3	Language of instruction	Polish
Semester of study	5	ECTS credits	3.0
Learning profile	practical	Assessment form	credit
Conducting unit			
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. Katarzyna Smolarz	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	0.0	0.0	30.0	0.0	0.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	2.0	43.0	75

Subject objectives

The aim of the course is to familiarize the students with the latest methods used in biotechnology of reproduction and breeding of invertebrate organisms in aquaculture.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[AKWAL3_W04] has an advanced understanding of the principles of optimization of breeding methods for aquatic invertebrates, and has acquired theoretical and practical knowledge of the diagnostic methods used	Students know the principles of optimization of methods for breeding aquatic invertebrates and they have acquired theoretical and practical knowledge related to the diagnostic methods.	[SW4] test/exam - oral or written [SW1] oral statement/ conversation/discussion
[AKWAL3-U12] can interact and work in a group, and assume different roles	the student is able to cooperate and work in a group, taking on various roles (program content: 1-2)	[SU8] observation of student's independent or team work
[AKWAL3-K03] is ready to follow the ethical principles in biological research and adhere to the principles of intellectual honesty	Students are aware of the role of ethics in biological research and the meaning of intellectual honesty. Students know and value the practical application of knowledge	[SK1] oral statement/conversation/ discussion
[AKWAL3-U03] can competently obtain selected aquatic invertebrates for ongoing breeding and perform simple practical tasks related to their breeding under the guidance of the scientific supervisor	Students can independently acquire selected aquatic invertebrates for the ongoing breeding and perform simple practical tasks related to the breeding under the supervision of an academic advisor	[SU1] oral statement/conversation/ discussion [SU4] test/exam - oral or written

Subject contents	1. Developmental stages of cultivated invertebrates - identification of larval and juvenile stages. 2. Cytogenetic techniques in genomic manipulations: methods of polyploid creation in selected marine mussels. 3. Determination of the effect of food on the growth rate and indicators of bioenergetic efficiency in selected species of crustaceans.
Prerequisites and co-requisites	Systematics of cultivated invertebrates and basics of their biology, ecology, biochemistry, physiology and genetics. Systematics and basic biology of cultivated organisms, Basic physiology of cultivated invertebrates, Basic biochemistry and genetics of cultivated organisms, Diseases of cultivated invertebrates

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
final assessment work (report)	51.0%	15.0%
knowledge of the material covered during laboratories (final written test)	51.0%	70.0%
work and activity during classe	51.0%	15.0%
