

Subject card

Subject name and code	Basic Physiology of Aquacultured Invertebrates - laboratory classes, PG_00201315						
Field of study	Aquaculture – Business And Technology						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2027/2028		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			2.0		
Learning profile	practical	Assessment form			credit		
Conducting unit	Laboratory of Ecophysiology and Bioenergetics -> Department of Marine Ecology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Joanna Hegele-Drywa				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
	Additional information: laboratory exercises						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	The aim of the course is to familiarise the student with the basic physiological processes of aquatic invertebrates and the influence of various factors on these processes.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[AKWAL3-K04] is ready to identify and recognize dilemmas connected with the profession and understands the need to improve professional competence		The student know and understand basic physiological processes, their link to the optimization of aquatic invertebrate husbandry methods and has acquired theoretical and practical knowledge of the diagnostic techniques used		[SK4] test/exam - oral or written		
	[AKWAL3-K03] is ready to follow the ethical principles in biological research and adhere to the principles of intellectual honesty		The student is prepared to adhere to ethical principles in research on basic physiological processes in cultivated invertebrates and to adhere to the principles of intellectual integrity		[SK6] demonstration of practical skills [SK8] observation of student's independent or team work		
	[AKWAL3-U03] can competently obtain selected aquatic invertebrates for ongoing breeding and perform simple practical tasks related to their breeding under the guidance of the scientific supervisor		The student can sample selected aquatic invertebrates for cultivation and can carry out simple practical tasks related to their cultivation and observation of basic physiological processes under the guidance of the supervisor		[SU6] demonstration of practical skills [SU8] observation of student's independent or team work		

Subject contents	1. Determination of food preference, rate of food consumption in different invertebrates. 2. Determination of ammonia excretion rate in different invertebrates. 3. Determination of rates of aerobic metabolism (respiration) in different invertebrates. 4. Determination of haemolymph osmolality of different invertebrates. 5. Determination of the energy value of selected cultivated invertebrates.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	factual correctness of the reports	51.0%	10.0%
	preparation for classes and activity	51.0%	10.0%
	colloquium/test	51.0%	80.0%
