University of Gdańsk

Subject card

Subject name and code	System analysis in spatial management, PG_00201363						
Field of study	Spatial Management						
Date of commencement of studies	October 2026		Academic year of realisation of subject	2026/2027			
Education level	Master's studies		Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	full-time studies		Mode of delivery	at the university			
Year of study	1		Language of instruction	Polish			
Semester of study	1		ECTS credits	3.0			
Learning profile	academic		Assessment form	exam			
Conducting unit	Division of Spatial Studies -> Institute of Socio-Economic Geography and Spatial Management -> Faculty of Social Sciences -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Grażyna Chaberek-Kałużniak					
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours	Self-study	SUM	
	Number of study hours	45		7.0	23.0	75	
Subject objectives	To acquire the ability to perceive the surrounding world as a set of complex and dynamic human systems and human organisations that are interrelated and conditioned by each other, as well as the ability to interpret spatial phenomena in accordance with the methodology of systems thinking, including organisation and management.The practical aim of the course is the ability to conduct a system analysis and synthesis on the example of a selected spatial system and analysis of managerial functions in spatial systems.						

Learning outcomes

Course outcome	Subject outcome	Method of verification
[GPMU2_W07] knows basic principles for creating and developing forms of individual entrepreneurship that make use of knowledge in the field of spatial management and corporate social responsibility, with particular emphasis on responsibility for environmental impact	Understands the procedure for the formation of individual forms of entrepreneurship, the business objectives of the organisation and identifies the conditions for their realisation	[SW4] test/exam - oral or written [SW5] implementation of a problem task
[GPMU2_W03] understands to a deeper extent, the conditions (natural, social, economic, cultural, legal) of processes taking place in spatial management, with particular emphasis on the specifics of Polish maritime areas and voivodships of northern Poland	Recognises types of social organisations, defines their function in the process of shaping space	[SW4] test/exam - oral or written [SW5] implementation of a problem task
[GPMU2_W01] recognises an in-depth degree, the interdisciplinary nature of spatial management and has ordered and theoretically founded knowledge of multidimensional approaches in spatial policy	defines elements of space as components of a system, the study of which requires a complex interdisciplinary approach	[SW1] oral statement/ conversation/discussion [SW5] implementation of a problem task
[GPMU2_U09] can independently plan own professional or scientific career and guide others in this respect	builds examples of strategic business and individual goals according to the SMART technique	[SU4] test/exam - oral or written [SU5] implementation of a problem task
[GPMU2_U05] formulates and tests hypotheses regarding determinants (natural, social, economic, cultural, legal) of spatial management	Identifies the determinants of economic activity development in a given area and its impact on the level of land use	[SU4] test/exam - oral or written [SU5] implementation of a problem task
[GPMU2_U02] properly selects sources and information derived from them, with particular regard to sources of spatial information, evaluates them critically and interprets them creatively	build spatial interaction models and, on their basis, analyse the causes and effects of the interaction of different factors on spatial systems	[SU1] oral statement/conversation/ discussion [SU5] implementation of a problem task [SU8] observation of student's independent or team work
[GPMU2_K03] is ready to initiate and organise activities for the benefit of society and environmental protection of the region, country and Europe in cooperation with various entities and authorities at various levels	proposes model linkages of spatial problems with particular attention to economic, social and environmental conflicts in accordance with the latest knowledge of spatial management	[SK1] oral statement/conversation/ discussion [SK5] implementation of a problem task

Subject contents

Lecture topics:A 1: Seeing the world anew - systems thinkingA 2: Systems and systems - fundamentals of systems theoryA3: Systems analysis and synthesisA 4: Systems modellingA 5: Process modellingA 6: Systems life-cycle and assessmentA 7: Systems behaviourA 8: Organisations as systemsA: Control and regulation Management as a type of controlA 10: Managerial functions, part 1A 11: Managerial functions, part 2A 12: Managerial functions, part 2A 13: Spatial territorial units as systemsA 14: Management in local government unitsA 15: Engineering contemporary systems - case studyB. ProbeImatics of exercisesB 1: Agility and responsibility (proactivity)B 2: Organised action cycle (objectives and planning tools)B 3: Thinking mapsB 4: Project (process) model - Gantt chartB 5: Organisational structure modelsB6: ARIS process model

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
open and closed questions test	51.0%	50.0%
case study	51.0%	50.0%
