

**Subject card**

<b>Subject name and code</b>	Water Management in The Natural and Anthropogenically Transformed Areas - lecture, PG_00201442						
<b>Field of study</b>	Water Management and Protection of Water Resources						
<b>Date of commencement of studies</b>	October 2026	<b>Academic year of realisation of subject</b>			2027/2028		
<b>Education level</b>	Bachelor's studies	<b>Subject group</b>			Obligatory subject group in the field of study Subject group related to practical vocational preparation		
<b>Mode of study</b>	full-time studies	<b>Mode of delivery</b>			at the university		
<b>Year of study</b>	2	<b>Language of instruction</b>			Polish		
<b>Semester of study</b>	4	<b>ECTS credits</b>			2.0		
<b>Learning profile</b>	practical	<b>Assessment form</b>			exam		
<b>Conducting unit</b>	Department of Hydrology -> Faculty of Oceanography and Geography -> Rector						
<b>Name and surname of lecturer (lecturers)</b>	<b>Subject supervisor</b>		prof. dr hab. Roman Cieśliński				
	<b>Teachers</b>						
<b>Lesson types</b>	<b>Lesson type</b>	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	<b>Number of study hours</b>	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
<b>Learning activity and number of study hours</b>	<b>Learning activity</b>	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	<b>Number of study hours</b>	30		1.0		19.0	50
<b>Subject objectives</b>	Learning about the essence of water management and its interdisciplinary dimension from the perspective of sustainable development. Deepen your understanding of your goals water management and main water management issues. The student knows and understands selected facts, objects and phenomena related to water management in geographical space and their methods and theories explaining the complex relationships between them.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[GWOZWL3-U06] The student has the ability assess the impact of planned investments on value and quality of water resources and propose options for solutions to protect and restore water resources, recognize their weaknesses and strengths as well as opportunities and threats.	The student is able to determine potential changes in the aquatic environment (especially water resources) under the influence of specific investments and the possibilities of counteracting these changes.	[SU4] test/exam - oral or written
	[GWOZWL3-U04] The student can distinguish between objectives, analyze and evaluate modern strategies for managing environment especially in the context of ecosystem approach to managing human activities in the environment with taking into account relevant law regulations and the indication of administrative bodies responsible for the management of waters and the protection of water resources.	The student knows the contemporary strategy of water management and management in Poland and in the world. Knows the Water Law and other legal provisions regarding water resources management.	[SU4] test/exam - oral or written
	[GWOZWL3-U03] The student has the ability observe and describe the changes taking place in water management and predict further directions of its development as well as conduct a critical analysis of case studies of problems of water management and protection of water resources in terms of impact on ecological, social and economic systems; natural valorization and assessment of quality of the environment.	The student understands the changes that occur in water management over time. Is able to distinguish good actions from bad ones in the context of water resources management and water management.	[SU4] test/exam - oral or written
	[GWOZWL3-K06] The student has the ability an informed and reliable assessment of the impact of humans on the aquatic environment.	The student knows the forms of human impact on the hydrosphere.	[SK4] test/exam - oral or written
	[GWOZWL3-W09] The student knows and understands potential threats and sources of pollution of surface and groundwater resulting from the development of civilization, in particular strong anthropopression.	The student is able to determine the main sources of hydrosphere pollution resulting from ongoing anthropopression.	[SW4] test/exam - oral or written
	[GWOZWL3-W03] The student has an advanced knowledge and understanding of the organisation and legal framework of environmental protection, nature conservation and water management, as well as the principles governing the organisation and operation of hydrological and meteorological services and the fundamentals of Integrated Environmental Monitoring.	The student knows the law on environmental protection and the model and structure of managing aquatic environment monitoring research.	[SW4] test/exam - oral or written
	[GWOZWL3-W05] The student has advanced knowledge and understanding of assumptions of the ecosystem approach to management of the environment and human activities in the environment as well as the development directions in the field of applied solutions and scientific research for the protection and restoration of water resources in selected divisions of the national economy.	The student knows and understands the basics of the functioning of ecosystems and the possibilities of managing them by humans.	[SW4] test/exam - oral or written
	[GWOZWL3-U12] The student can formulate opinions on a selected topic and prepare small studies in foreign language.	The student is able to formulate opinions on a selected topic and prepare small studies in English	[SU1] oral statement/conversation/discussion

Subject contents	<p>A.1. Origin and definition of the concept of water management.</p> <p>A.2. The concept of water resources, their types and sizes, and their differentiation depending on the degree of environmental transformation.</p> <p>A.3. Water management in the main sectors of the national economy.</p> <p>A.4. Water management in protected areas.</p> <p>A.5. Units related to water administration and management.</p> <p>A.6. A monitoring network important for proper water management.</p> <p>A.7. Adaptation of water management methods to climate change.</p>		
Prerequisites and co-requisites	Key competences at secondary school level, knowledge and skills in geography.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Pass with grade, written test exam.	51.0%	100.0%
