

Subject card

Subject name and code	Mathematical Methods in Oceanography - lecture, PG_00201908						
Field of study	Oceanography						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	Master's studies	Subject group			Obligatory subject group in the field of study Optional subject group		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			3.0		
Learning profile	academic	Assessment form			exam		
Conducting unit	Division of Mathematical Methods of Physics -> Institute of Theoretical Physics and Astrophysics -> Faculty of Mathematics, Physics and Informatics -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Marcin Marciniak				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	0.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		28.0	75
Subject objectives	Students will become proficient in matrix algebra and index notation; will be introduced to vector calculus in curvilinear coordinates; will be able to calculate Fourier transforms and solve most frequent types of differential equations, using relevant software.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OCEANMU2-K04] is ready to critically evaluate his/her knowledge and received content in the field of natural sciences in particular in the field of the studied specialty, a in problematic situations, supports oneself with knowledge experts	is ready to critically evaluate his/her knowledge and received content in mathematical methods used in oceanography and seeks expert support when necessary	[SK1] oral statement/conversation/discussion [SK4] test/exam - oral or written
	[OCEANMU2-U06] is able to use specialized computer software as well as advanced mathematical and statistical methods to analyze data and describe processes and phenomena occurring in the marine and coastal environment; evaluates their reliability and usefulness and performs critical analysis	can use advanced mathematical methods in data analysis and modelling of processes and phenomena occurring in the marine environment and coastal zone	[SU4] test/exam - oral or written
	[OCEANMU2-W03] has an in-depth understanding of research methods used in oceanography and related sciences, and interprets their mechanisms and interrelationships across different spatial and temporal scales	knows and understands, in-depth, mathematical methods and techniques used in oceanography	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion
[OCEANMU2-W01] knows and understands in-depth specialized terminology used in oceanography and related sciences (in Polish and a selected foreign language)	knows and understands in-depth specialized, mathematical terminology used while applying mathematical methods to solve oceanographical problems (in Polish and a English)	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion	
Subject contents	<ul style="list-style-type: none"> Selected topics in linear algebra; index notation, Vector field analysis and volume, surface and line integrals, integral theorems, Curvilinear coordinate systems and differential operators in curvilinear coordinate systems, A practical introduction to tensor analysis; The Fourier transform; Selected topics in ordinary and partial differential equations 		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	in-class discussions	51.0%	10.0%
	final written examination	51.0%	90.0%
Recommended reading	Basic literature	<ul style="list-style-type: none"> Karaśkiewicz E., An Outline of Vector and Tensor Theory, PWN 1974 (in Polish) Byron F.W., Fuller R.W., Mathematics in classical and quantum physics, tom 1, PWN 1975 (in Polish) Sirovich L., 1998, Introduction to applied mathematics, Springer-Verlag 	
	Supplementary literature	<ul style="list-style-type: none"> Arfken, G.B., Weber H.J., Harris F.E., 2012. Mathematical methods for Physicists: A comprehensive guide (selected chapters) Strzelecki, 2006, A short introduction to differential equations, University of Warsaw Press (in Polish) Wydawnictwo Uniw. Warszawskiego (or alternative) Boelkins M.R., Goldberg J.L., Potter M., 2009, Differential Equations with Linear Algebra, Oxford University Press Aris R., 1989. Vectors, tensors and the basic equations of fluid mechanics. Dover Publ. (chapters 1-4; very condensed, heavy and generally not suitable as a first read, but a good indication of topics needed in cartesian tensors) 	
	eResources addresses		
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> Define and calculate the Fourier Transform of a given function. State the Ostrogadski-Gauss Theorem and describe its applications. Define and calculate divergence of a given cartesian tensor.
