<b>Subject objectives</b>	Presentation of ecology as a scientific discipline using specific and proper concepts and research methods. It is assumed that the student, in addition to knowledge of basic concepts and techniques related to the study of ecological systems, will understand the importance of abiotic and biotic factors and processes influencing the structure and functioning of ecosystems. In addition, student will understand the importance of the impact of human activity on the functioning of the Earth's ecosystems and will learn the assumptions of the idea of sustainable development.						
<b>Learning outcomes</b>	<b>Course outcome</b>		<b>Subject outcome</b>			<b>Method of verification</b>	
	[OCEANL3-W02] has a broad knowledge and understanding of physical, biological, chemical, and geological processes and phenomena occurring in aquatic environments, with particular emphasis on the marine environment		Knows and understands the basic processes and phenomena occurring between living and non-living elements of the environment.			[SW3] text preparation/written work	
	[OCEANL3-U12] is able to systematically expand and update oceanographic knowledge and enhance professional qualifications		Is able to systematically expand and update ecological knowledge.			[SU1] oral statement/conversation/discussion [SU3] text preparation/written work	
	[OCEANL3-K01] is willing to plan and implement, individually or as a team, the subsequent stages of the entrusted task, is willing to take responsibility for the results of these works, effectively cooperates in the team and performs various roles in it		Is ready to take responsibility for his/her own work and to comply with the principles of teamwork and responsibility for jointly implemented tasks.			[SK3] text preparation/written work [SK6] demonstration of practical skills [SK8] observation of student's independent or team work	

Subject contents	<p>1. Methods of studying individuals and populations.</p> <p>2. Populations group characteristics (including numbers, density, reproduction, mortality, age structure).</p> <p>3. Selected issues in evolutionary ecology genetic drift.</p> <p>4. Ecological tolerance.</p> <p>5. Trophic interactions between organisms.</p> <p>6. Competitive relationships.</p> <p>7. Ecological succession.</p>
