

Subject card

Subject name and code	History of Mathematics I, PG_00204251						
Field of study	Mathematics						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	academic	Assessment form			credit		
Conducting unit	Institute of Mathematics -> Faculty of Mathematics, Physics and Informatics -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Agnieszka Demby				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		1.0		19.0	50
Subject objectives	<ul style="list-style-type: none"> - An overview of the development of mathematics from ancient times to the 17th century, including its relationship to the development of civilization and other fields of science. - An analysis of the development of selected mathematical concepts and methods, the formulations and proofs of selected theorems, and symbolic notations. 						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[MATL3_W11] knows and understands the fundamental dilemmas of modern civilization in the context of the development of mathematics		<ul style="list-style-type: none"> - Is able to identify and characterize the main stages of the development of mathematics from the earliest times to the 17th century. - Is able to perceive the development of mathematics in the context of the development of civilization and other fields of science. - Is able to identify examples of difficulties that mathematicians encountered during the development of mathematics, which also occur in human development today. 			[SW4] test/exam - oral or written	
	[MATL3_W06] knows and understands at an advanced level the structure of selected mathematical theories, is able to use mathematical formalism to build and analyze mathematical models		<ul style="list-style-type: none"> - Is able to identify the main stages of development of selected mathematical concepts and methods. - Is able to identify the initial stages of development of mathematical theories through knowledge of the formulations and proofs of selected theorems and the development of symbolic notations. 			[SW4] test/exam - oral or written	

Subject contents	<ol style="list-style-type: none"> 1. The first traces of the concepts of number and form (Paleolithic). Different ways of representing numbers. 2. The empirical nature of ancient Egyptian and Babylonian mathematics. 3. Ancient Greek mathematics in the Hellenistic period: Thales and the methodological canon of Doric knowledge, the Pythagoreans. 4. Ancient Greek mathematics in the Hellenistic period - Euclid, Archimedes, and others. 5. Eastern mathematics: China, India, the Arabs, and others. 6. European mathematics in the Middle Ages and the Renaissance. 7. Achievements that determined the breakthrough in the 17th century. 8. Information on the development of mathematics in the modern era. 		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	51.0%	100.0%
	Observation of student's attitude	51.0%	0.0%
