

Subject card

Subject name and code	Probability Concepts, PG_00204480						
Field of study	Finance and Accounting						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2027/2028		
Education level	Bachelor's studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			English		
Semester of study	3	ECTS credits			5.0		
Learning profile	academic	Assessment form			credit		
Conducting unit	Department of Statistics -> Faculty of Management -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Anna Gierusz-Matkowska				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		4.0		61.0	125
Subject objectives	Presentation of basic probability concepts, including types of random variables and their distributions, and development of skills in applying them to economic problems and interpreting results.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[FiRL3_U02] Can identify, analyze or design adequate solutions to problems in finance and accounting	Student selects appropriate probability distribution to a given problem and calculates probabilities and parameter values using known distributions	[SU4] test/exam - oral or written
	[FiRL3_U03] Can obtain data and verify its accuracy from appropriately selected sources and use these data to analyse and evaluate economic processes and phenomena in management and quality sciences, economics and finance	Student uses data to calculate probabilities of financial events	[SU4] test/exam - oral or written
	[FiRL3_W05] Knows and understands the tools and techniques for obtaining, compiling, and analyzing the data necessary to assess the financial situation of various entities in management, quality sciences, economics, and finance	Student recognizes different types of random variables, identifies appropriate probability distribution for a given problem	[SW4] test/exam - oral or written
	[FiRL3_U01] Can analyze and interpret socio-economic processes and phenomena – from the finance and accounting perspective – using knowledge and tools from management, quality sciences, economics, and finance	Student employs probability distributions to model financial and investment phenomena	[SU4] test/exam - oral or written
Subject contents	<ul style="list-style-type: none"> • Probability concepts: an outcome, an event, random variable. • Definition of probability and calculation of probability. • Bayes formula. • Probability trees and conditional expectations. • Independence of events and of random variables. • Common probability distributions for discrete and continuous random variables (binomial, poisson, uniform, normal). • Joint probability function. • Calculation and interpretation of covariance and correlation. • Statistical measures of return on a portfolio. • Simulation methods. 		
Prerequisites and co-requisites	Knowledge from two subjects: 1. Descriptive Statistics 2. Mathematics for Economics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	written test 1	51.0%	50.0%
	written test 2	51.0%	50.0%
