

**Subject card**

<b>Subject name and code</b>	AI in Data Analysis, PG_00204634						
<b>Field of study</b>	Informatics and Econometrics						
<b>Date of commencement of studies</b>	October 2026	<b>Academic year of realisation of subject</b>			2026/2027		
<b>Education level</b>	Master's studies	<b>Subject group</b>			Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
<b>Mode of study</b>	part-time studies	<b>Mode of delivery</b>			at the university		
<b>Year of study</b>	1	<b>Language of instruction</b>			Polish		
<b>Semester of study</b>	2	<b>ECTS credits</b>			5.0		
<b>Learning profile</b>	academic	<b>Assessment form</b>			credit		
<b>Conducting unit</b>	Department of Econometrics -> Faculty of Management -> Rector						
<b>Name and surname of lecturer (lecturers)</b>	<b>Subject supervisor</b>		dr hab. Anna Zamojska				
	<b>Teachers</b>						
<b>Lesson types</b>	<b>Lesson type</b>	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	<b>Number of study hours</b>	8.0	8.0	16.0	0.0	0.0	32
	E-learning hours included: 0.0						
<b>Learning activity and number of study hours</b>	<b>Learning activity</b>	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	<b>Number of study hours</b>	32		2.0		91.0	125
<b>Subject objectives</b>	The course aims to demonstrate the various AI methods used in data processing and analysis and their practical application.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[[iEMU2_W10] Possesses a deeper understanding of the essential dilemmas of modern civilization, particularly concerning the IT development	The student knows and understands the limits of artificial intelligence in data analysis. He knows the need to supplement his knowledge in this area constantly.	[SW2] presentation/project/paper/report
	[[iEMU2_W03] Possesses a thorough understanding of how organizations operate, including the complex phenomena, processes, and relationships that exist in their environments and how these impact their functioning	The student adapts the AI tools used in data analysis to the structure of the organisation under study and its interaction with the environment.	[SW2] presentation/project/paper/report
	[[iEMU2_W08] Possesses a comprehensive understanding of the methods, conditions, directions, and dilemmas involved in applying advanced econometrics, informatics or statistics tools in response to dynamic environmental changes	The student applies advanced AI tools with their advantages and disadvantages. Performs robustness analysis of the obtained results with modification of the model resulting from environmental changes.	[SW2] presentation/project/paper/report
	[[iEMU2_U03] Is able to obtain and verify data from properly selected sources and to collect, process, and visualize it using modern econometrics, informatics or statistics tools	The student creatively analyses the acquired data, compares it with existing theories, and proposes new solutions. Then, the student clearly and communicatively presents the results of the analyses in verbal and written form.	[SU2] presentation/project/paper/report [SU5] implementation of a problem task
[[iEMU2_U06] Can utilize structured and detailed knowledge of management, quality sciences, economics, and finance to address dilemmas and develop innovative solutions for complex or unusual problems that arise in professional settings	The student implements the basic tools of artificial intelligence in data analysis and justifies the application of the selected AI model in practice. The student prepares complex solutions to unusual problems and recognises the future consequences of the implemented solutions.	[SU2] presentation/project/paper/report	
Subject contents	<ol style="list-style-type: none"> <li>History of artificial intelligence. Main assumptions.</li> <li>Directions of research on learning and problem solving under deterministic conditions.</li> <li>Directions of research on learning and problem solving under uncertainty.</li> <li>Evaluation of historical and contemporary views on the functioning of artificial intelligence.</li> <li>Ethical problems in the application of artificial intelligence.</li> <li>Introduction to machine learning (Machine Learning): <ul style="list-style-type: none"> <li>supervised learning (Supervised Learning) (solving regression and classification problems)</li> <li>Unsupervised Learning (Unsupervised Learning) (cluster analysis algorithms, anomaly and novelty detection, visualization and dimensionality reduction)</li> <li>Semisupervised learning (Semisupervised Learning)</li> <li>reinforcement learning (Reinforcement Learning) (passive, active learning)</li> <li>natural language processing (Natural Language Processing)</li> </ul> </li> </ol>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	51.0%	100.0%
