Subject contents	<p>Types of enterprise value. Different approaches to defining value (book value, market value, intrinsic value, replacement value, liquidation value) and their application to business practice and management decisions are discussed.</p> <p>Modern asset-based methods of business valuation. Methods based on the valuation of assets (e.g., adjusted book value, replacement method) are analyzed and sample calculations based on balance sheet data are performed.</p> <p>Modern income-based methods of business valuation. Learns how to apply methods based on future cash flows (DCF, EVA), creating financial projections and estimating net present value.</p> <p>Contemporary mixed methods of business valuation. Methods combining income and asset approaches (e.g., German method, Swiss method) are presented, performing comparative analysis of their results.</p> <p>Modern market methods of business valuation. Comparative methods based on market multipliers and benchmarks from transactions of similar companies are discussed, learning how to interpret them.</p> <p>Differences in the valuation of a sole proprietorship and a company. The legal, tax and asset peculiarities affecting the valuation of different organizational and legal forms are analyzed, with emphasis on the difficulties in estimating intangible assets in a sole proprietorship.</p> <p>Risk in creating enterprise value. Sources of risk (operational, financial, market) are identified and ways to account for them in valuation through discounting, scenarios and sensitivity analysis are discussed.</p>											
Prerequisites and co-requisites	<p>Knowledge of corporate finance and their behavior on the market leading to value creation is useful for the implementation of the course. Creating valuation models requires the use of mathematical and statistical skills.</p>
