

Subject card

Subject name and code	Ecophysiology of Marine Animals - laboratory , PG_00204899						
Field of study	Oceanography						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	Master's studies	Subject group			Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study		
Mode of study	full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			3.0		
Learning profile	academic	Assessment form			credit		
Conducting unit	Laboratory of Ecophysiology and Bioenergetics -> Department of Marine Ecology -> Faculty of Oceanography and Geography -> Rector						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Joanna Hegele-Drywa					
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
	Additional information: Laboratory classes						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		41.0	75
Subject objectives	Learning about the basic life processes of marine animals, as well as behavioural-physiological adaptations to the environment and the various types of changes in it.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[OCEANMU2-K01] is ready to plan, implement and supervise, individually or collectively, next stages of the entrusted task, is ready to take responsibility for its results;	Student is able to plan, carry out and supervise, individually or in a team, the successive stages of laboratory investigations into the fundamental physiological processes of marine animals, takes responsibility for the results, works effectively in a team in a variety of roles including leadership.	[SK3] text preparation/written work [SK8] observation of student's independent or team work
	[OCEANMU2-U02] is able to fluently and accurately use scientific terminology when presenting and discussing oceanographic issues, and to propose and justify innovative solutions	Student can use scientific terminology fluently and appropriately in presenting and discussing problems in marine animal ecophysiology.	[SU1] oral statement/conversation/discussion [SU3] text preparation/written work [SU4] test/exam - oral or written
	[OCEANMU2-W03] has an in-depth understanding of research methods used in oceanography and related sciences, and interprets their mechanisms and interrelationships across different spatial and temporal scales	Student knows and understands the research methods used in marine animal ecophysiology research.	[SW4] test/exam - oral or written [SW1] oral statement/conversation/discussion
[OCEANMU2-U04] is ready to develop in an analytical and synthetic way research and analysis results and based on them creating conclusions	Student can elaborate analytically and synthetically the results of laboratory tests and analyses and make correct conclusions about the influence of biotic and abiotic factors on the behaviour and basic physiological processes of marine animals .	[SU3] text preparation/written work	
Subject contents	<ol style="list-style-type: none"> 1. The influence of abiotic factors on the behaviour of marine animals. 2. Nutrition (filtration rate, food preference, chemoreception, food consumption rate). 3. Oxygen consumption (aerobic metabolism) 4. Ammonia excretion in selected marine animals. 5. Osmotic regulation. 6. Energy value of marine animals. 		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	colloquium/test	51.0%	70.0%
	preparation for classes and activity	51.0%	10.0%
	factual correctness of the report	51.0%	20.0%
