

Subject card

Subject name and code	Fundamentals of Hydrography - laboratory classes , PG_00201102						
Field of study	Marine Hydrography						
Date of commencement of studies	October 2027		Academic year of realisation of subject		2028/2029		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to practical vocational preparation		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		English		
Semester of study	3		ECTS credits		1.0		
Learning profile	practical		Assessment form		credit		
Conducting unit							
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Artur Grządziel				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		1.0		9.0	25
Subject objectives	Presentation of the role and importance of marine hydrography for human activities at sea, the organization and tasks of the national marine hydrographic service, the principles and organization of conducting hydrographic works and legal aspects of hydrographic activities.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[HML3-K01] is ready to correctly identify and resolve professional dilemmas, especially in the aspects of security and entrusted property		is ready to correctly identify and resolve professional dilemmas, particularly those related to safety		[SK2] presentation/project/paper/report		
	[HML3-U02] is able to select and apply basic research techniques and tools in the field of aquatic environment research, as well as plan and carry out measurements, develop the obtained results and interpret them correctly		is able to select and apply basic survey techniques in marine hydrography		[SU2] presentation/project/paper/report		
	[HML3-U06] is able to make a preliminary economic assessment of the proposed solutions and engineering activities undertaken		is able to use hydrographic terminology in Polish and English		[SU2] presentation/project/paper/report		
	[HML3-U04] is able to use analytical, simulation and experimental methods to identify, formulate and solve engineering tasks		is able to select appropriate survey systems for various hydrographic works		[SU1] oral statement/conversation/discussion [SU2] presentation/project/paper/report		
	[HML3-U01] is able to plan and conduct experiments, including computer simulations, interpret the results obtained and draw conclusions		is able to use national and foreign references, literature to assess, perform critical analysis and synthesis of information		[SU2] presentation/project/paper/report		

Subject contents	Marine hydrography - its role and importance for human activity at sea Introduction to hydrography. The concept of marine hydrography. Basic definitions. IHO. The importance of hydrographic measurements for human activities at sea. Organization and tasks of the hydrographic service in Poland Organization of the hydrographic service. Tasks of the hydrographic service. State Maritime Hydrographic Service. BHMW. Hydrographic Service of the Navy and Maritime Offices. National and international requirements and standards. Professional qualifications of a hydrographer. Marine hydrographer of categories A and B. Training of hydrographers in Poland. Minimum requirements for hydrographic surveys. Standard S 44, edition 6.0.0. Standards S-5A, S-5B. Publication C-13. Hydrographic works - types and general requirements. The concept of hydrographic works. Maritime administration. Types of hydrographic works. General requirements. Bathymetric measurements. Sonar measurements. Geophysical measurements. Oceanographic measurements. Geodetic measurements. Criteria for the division of hydrographic works. Polish sea areas. Areas of survey work. Stages of performing hydrographic worksGeneral principles of conducting survey measurements. Division into stages of hydrographic work. Surveys planning. Technical design and Technical task. Work planning in the central and executive units. Survey equipment and survey units. Marine construction, hydrotechnical and hydrographic measurements Naval construction basic definitions. Deepening of the bottom, shallowing. Bottom reinforcements. Bathymetric plans and bottom cleanliness certificate. Bottom examination report. Navigation devices and systems used in hydrography. Basic devices and measurement systems used in marine hydrography. Principles of using hydrographic measuring devices. The role and importance of navigational and hydrographic protection of human activities at sea. Basic concepts in the field of hydrographic activities.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	report	51.0%	100.0%
