

Subject card

Subject name and code	Hydrographic Data Management - laboratory classes , PG_00201139						
Field of study	Marine Hydrography						
Date of commencement of studies	October 2027		Academic year of realisation of subject		2029/2030		
Education level	Bachelor's studies		Subject group		Obligatory subject group in the field of study Subject group related to practical vocational preparation		
Mode of study	full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		2.0		
Learning profile	practical		Assessment form		credit		
Conducting unit							
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Dominik Iwen				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	40.0	0.0	0.0	40
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	40		3.0		12.0	55
Subject objectives	Mastering the skills of configuring the measurement system, controlling the quality of collected data, creating various types of databases and documentation of work carried out.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[HML3-K02] is ready to correctly determine the priorities in professional work for the implementation of a task specified by himself/ herself or others		is ready to assess the objectives of the measurement work and adjust the methods accordingly		[SK2] presentation/project/paper/report		
	[HML3-U01] is able to plan and conduct experiments, including computer simulations, interpret the results obtained and draw conclusions		is able to: - build a digital model of the seabed based on collected data; - present the collected data in a GIS system		[SU2] presentation/project/paper/report		
	[HML3-U02] is able to select and apply basic research techniques and tools in the field of aquatic environment research, as well as plan and carry out measurements, develop the obtained results and interpret them correctly		is able to: - configure the hydrographic system on the survey vessel; - monitor the data acquisition process during the survey		[SU2] presentation/project/paper/report		
	[HML3-U07] is able to effectively use information and communication techniques, including utility programs to solve professional problems		is able to: - securely store collected data; - perform preliminary analysis of measurement results		[SU2] presentation/project/paper/report		
	[HML3-U12] is able to use engineering standards and norms and apply technologies specific to the field of study		is able to prepare documentation for measurement work		[SU2] presentation/project/paper/report		

Subject contents	Laboratories: Configuration of the measurement system on the survey vessel. Taking into account the integration of data from various sensors, data recording parameters, the possibility of real-time quality control and the security of data storage on the vessel. Managing hydrographic databases. Study visit to the Hydrographic Office of the Polish Navy. Manual and automated processing of raw bathymetric data. Identification of objects, false detections and noise. Assessment of survey accuracy in the context of accuracy requirements. DTM/DSM development based on bathymetric survey data, visualization of the digital bottom model. Selection of product formats in the context of use in databases. Organization of data in various formats, reference systems and projections in a coherent GIS project database. Data visualization depending on the project objective. Preparation of a report on measurement work, including a description of the generated bottom models.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	report	51.0%	100.0%
Recommended reading	Basic literature	1. LONGLEY P. A. et al.: GIS. Theory and practice. PWN Scientific Publishing House, 2008. 2. PDNO-06-A072 Marine hydrography. Organization and principles of conducting research. 3. PDNO-06-A073 Marine hydrography Principles of data collection and presentation of results.
