University of Gdańsk

Subject card

Subject name and code	GIS and Remote Sensing I - laboratory, PG_00198935		
Field of study	Geography		
Date of commencement of studies	October 2027	Academic year of realisation of subject	2027/2028
Education level	Bachelor's studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	3.0
Learning profile	academic	Assessment form	credit
Conducting unit	Geographic Information System (GIS) Laboratory -> Faculty of Oceanography and Geography -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	dr Maciej Markowski	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	0.0	0.0	30.0	0.0	0.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	4.0	41.0	75

Subject objectives

- Familiarization with the capabilities and practical applications of GIS
- Learning the principles of cartographic image composition
- Understanding selected methods of graphic analysis
- Ability to analyze geographic data using GIS
- Presentation of results, map composition, and printing
- Proficiency in GIS software

Learning outcomes

Course outcome	Subject outcome	Method of verification
[GEOGRL3-W06] knows advanced methods of acquiring, processing, and compiling geographic environmental data, as well as methods of analyzing and interpreting such data	The student independently acquires, processes, and analyzes spatial data in a GIS environment, creating databases using both spatial and non-spatial data and applying various metadata formats.	[SW4] test/exam - oral or written
[GEOGRL3-U03] can plan and conduct, independently and as part of a team, simple research in the field of geography under the supervision of a scientific advisor, based on the necessary information from professional literature and other sources	The student can plan and conduct GIS analyses based on diverse spatial data sources, both individually and collaboratively in a team.	[SU5] implementation of a problem task
[GEOGRL3-U04] can apply field and laboratory methods and research tools, spatial analysis methods, and methods of presenting research results in the field of geography, assess their usefulness for tasks in which the application goal of geography can be realized	The student applies spatial analysis methods and data visualization tools to effectively present GIS research results and evaluates their usefulness in addressing spatial problems.	[SU5] implementation of a problem task
[GEOGRL3-K02] is prepared to bear full responsibility for the actions taken actions and adhere to the principles of professional ethics and principles of intellectual honesty, is aware of the importance of a professional approach in professional life professional life	The student ensures the transparency of the research process by documenting data sources and methodology (metadata), thereby guaranteeing the reproducibility and integrity of the presented cartographic results.	[SK5] implementation of a problem task

Subject contents

B.1 Understanding GIS concepts and GIS software
B.2 Application of metadata and ability to acquire, process, and create them
B.3 Creating cartographic compositions according to cartographic principles
B.4 Working with non-spatial point data
B.5 Acquisition and processing of vector data

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
practical and theoretical exercises	51.0%	60.0%
test	51.0%	40.0%

eResources addresses	

Example issues/ example questions/ tasks being completed

- What types of data and layers can be distinguished in GIS, and what basic operations can be performed on them?
- What are metadata, and why are they important when working with spatial data?
- What are the main stages of acquiring and processing vector data in GIS?

Work placement	Not applicable
