University of Gdańsk

Subject card

Subject name and code	Geographical Information Systems - laboratory classes I, PG_00192599		
Field of study	Water Management and Protection of Water Resources		
Date of commencement of studies	October 2027	Academic year of realisation of subject	2027/2028
Education level	Bachelor's studies	Subject group	Obligatory subject group in the field of study Subject group related to practical vocational preparation
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	2.0
Learning profile	practical	Assessment form	credit
Conducting unit	Geographic Information System (GIS) Laboratory -> Faculty of Oceanography and Geography -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	dr Maciej Markowski	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	0.0	0.0	30.0	0.0	0.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	1.0	19.0	50

Subject objectives

Introduction to GIS as a computer system and its tasks (using ArcGIS Pro as an example). Understanding geospatial technology, the specifics of spatial data, and methods for modeling and visualizing them. Acquiring theoretical foundations and skills in describing data locations on Earth's surface. Acquisition of primary and secondary data for GIS and their initial processing. Introduction to basic vector and raster functions. Understanding principles and methods of presenting work results in the form of maps. Introduction to the basics of hydrological modeling in GIS.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[GWOZWL3-U08] use basic mathematical and statistical methods to analyze data and describe phenomena and processes occurring in the environment, as well as methods of information technology to assess the risk of threats to the of the environment, especially the hydrosphere.	The student can use basic methods of spatial data analysis and present phenomena and processes occurring in the environment on a map. He can also use GIS computational methods to assess environmental hazard risks, especially in the hydrosphere. Contents: B5-B8.	[SU2] presentation/project/paper/ report [SU4] test/exam - oral or written
[GWOZWL3-U07] use literature and other available sources of information, including information technology, multimedia, Internet, databases, and select and critically evaluate information.	The student is able to use specialist literature and other available sources of information, including information technology, multimedia, Internet resources, databases, and mapping services, and to select and critically evaluate information. Contents: B1, B3-B4.	[SU2] presentation/project/paper/ report [SU4] test/exam - oral or written
[GWOZWL3-K04] maintain a critical attitude in accepting information from various sources relating to issues in the field of water management.	The student demonstrates a critical approach to receiving information from various sources and can assess the quality of acquired data related to water management issues. Contents: B4-B6.	[SK2] presentation/project/paper/ report
[GWOZWL3-W04] research techniques, methods and tools currently used in water management and the protection of water resources, in both the natural and social sciences, including basic statistical and IT tools enabling the description, modelling and interpretation of data concerning phenomena and processes occurring in the aquatic environment, as well as tools for describing relationships within socio-ecological systems.	The student knows and understands research techniques and methods, as well as tools (geographic information system), currently used in water management and water resources protection, both in natural and social sciences contexts. This includes basic statistical and IT tools enabling description, presentation, modeling, and interpretation of spatial data concerning phenomena and processes occurring in the water environment. Contents: B1-B8.	[SW4] test/exam - oral or written [SW2] presentation/project/paper/ report

Subject contents

B.1 Concept of geotechnology and spatial data. Coordinate systems. Map projections.

B.2 Introduction to the ArcGIS Pro software interface, exploration of spatial data.

B.3 Spatial data models. Digital maps. Basic principles of data symbolization.

B.4 Utilization of diverse datasets in geographic projects (e.g., MPHP, Corine, VMap, SRTM, NMT CODGIK). Exploration and analysis of attribute data.

B.5 Understanding principles and methods of presenting work results in map form. Creating maps at different scales and using various projections.

B.6 Working with point data acquired from different sources (spatial and non-spatial).

B.7 Registration of spatial data in coordinate systems. Understanding georeferencing and rectification. Determination of registration error.

B.8 Data input and editing. Screen digitization techniques.

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
test	51.0%	40.0%
practical and theoretical exercises	51.0%	60.0%
