University of Gdańsk

Subject card

Subject name and code	Hydraulics and Hydromechanics - lecture, PG_00201423		
Field of study	Water Management and Protection of Water Resources		
Date of commencement of studies	October 2027	Academic year of realisation of subject	2028/2029
Education level	Bachelor's studies	Subject group	Obligatory subject group in the field of study Subject group related to practical vocational preparation
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	2	Language of instruction	Polish
Semester of study	3	ECTS credits	1.0
Learning profile	practical	Assessment form	credit
Conducting unit	Department of Hydrology -> Faculty of Oceanography and Geography -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. Michał Szydłowski	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	0.0	0.0	0.0	15

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	15	1.0	9.0	25

Subject objectives

1. To expand students' knowledge of the behavior of water under the action of external forces (laws governing statics or fluid motion).2. To familiarize students with the characteristics of water flow in pipes, open troughs, channels and soil (laws of fluid mechanics).3. To indicate the practical application and use of water and its physical properties in engineering.4. To educate the basics of engineering calculation methods of river hydraulics.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[GWOZWL3-W04] research techniques, methods and tools currently used in water management and the protection of water resources, in both the natural and social sciences, including basic statistical and IT tools enabling the description, modelling and interpretation of data concerning phenomena and processes occurring in the aquatic environment, as well as tools for describing relationships within socio-ecological systems.	K_W04 - knows and understands research techniques and methods used in hydraulics including basic statistical tools to describe and interpret data on phenomena and processes in the aquatic environment	[SW4] test/exam - oral or written
[GWOZWL3-W01] in advanced basic biological, physical and chemical processes and phenomena, as well as analyzes their mutual relations and course in relation to natural environment and socio-ecological systems.	K_W01 - knows and understands to an advanced degree the basic phenomena of fluid mobility	[SW4] test/exam - oral or written
[GWOZWL3-K03] systematic further education and professional development, updating and expand his knowledge and skills, understands the limitations of his own knowledge in the context of civilization progress and recognizes authorities in the professional and scientific environment.	K_K03 - is ready to systematically update and expand his knowledge and skills	[SK4] test/exam - oral or written
[GWOZWL3-U08] use basic mathematical and statistical methods to analyze data and describe phenomena and processes occurring in the environment, as well as methods of information technology to assess the risk of threats to the of the environment, especially the hydrosphere.	K_U08 - can use basic mathematical and statistical methods to analyze data and describe phenomena related to fluid mobility	[SU4] test/exam - oral or written

Subject contents

1. Physical properties of liquids.2. Basic laws of hydrostatics.3. Study of the phenomena occurring in water during movement - fluid dynamics.4. The application of hydrology to the fundamentals of environmental engineering and water management - water structures, their operation and impact on the natural environment.5. Hydraulics of water structures - regulation of water outflow conditions.

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
test	51.0%	100.0%
