University of Gdańsk

Subject card

Subject name and code	Pathology and molecular diagnostics of aquatic organisms - laboratories classes, PG_00192234		
Field of study	Marine Biotechnology		
Date of commencement of studies	October 2027	Academic year of realisation of subject	2027/2028
Education level	Master's studies	Subject group	Obligatory subject group in the field of study
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	English
Semester of study	1	ECTS credits	2.0
Learning profile	academic	Assessment form	credit
Conducting unit	Laboratory of Aquaculture -> Department of Marine Biology and Biotechnology -> Faculty of Oceanography and Geography -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	dr Ligia Panasiak	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	0.0	0.0	20.0	0.0	0.0	20

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	20	2.0	28.0	50

Subject objectives

The main goal is to obtain practical knowledge in the field of molecular diagnostics used in wild and farmed animals organisms from the aquatic environment. Students will acquire the ability to collect biological samples for further analysis laboratory, isolation and storage of research material, pathogen detection, ploidy assessment, genetic identification of sex and analysis disease disorders and gender development disorders.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[MBMU2-KW04] Knows and deeply understands advanced research methods used in marine biotechnology and related sciences	Knows and understands advanced methods to an in-depth level research used in pathology, molecular diagnostics of fish and related sciences	[SW2] presentation/project/paper/ report [SW5] implementation of a problem task
[MBMU2-KK03] Is ready to apply the principles of occupational health and safety, especially in the laboratory and at sea; is responsible for their own and others' safety; can recognize hazards and take appropriate action	Is ready to apply occupational health and safety rules especially work in a diagnostic laboratory; is ready to be responsible for the safety of himself and others, and to recognize and take risks activities used	[SK6] demonstration of practical skills
[MBMU2-KU01] Can plan and conduct research in the laboratory and at sea, and to document procedures and results. Independently or under the supervision of an authorized staff member, carries out work using specialized equipment. Complies with occupational health and safety regulations.	Is able to plan and conduct research in the laboratory diagnostics and document activities and results; can under guidance the caregiver uses laboratory equipment; applies safety rules and occupational hygiene	[SU2] presentation/project/paper/ report [SU6] demonstration of practical skills

Subject contents

A1: Histological and cytogenetic characterization of fish with gonadal development disorders. A2: Molecular genetic diagnosis of sex in fish. A3: Application of the RT-PCR technique to identify VHS, IHN and IPN viruses and bacteria causing fish diseases.
