University of Gdańsk

Subject card

Subject name and code	Application of Molecular Tools in Marine Research - laboratory, PG_00204937		
Field of study	Oceanography		
Date of commencement of studies	October 2027	Academic year of realisation of subject	2028/2029
Education level	Master's studies	Subject group	Obligatory subject group in the field of study Optional subject group Subject group related to scientific research in the field of study
Mode of study	full-time studies	Mode of delivery	at the university
Year of study	2	Language of instruction	Polish
Semester of study	3	ECTS credits	1.0
Learning profile	academic	Assessment form	credit
Conducting unit	Laboratory of Aquaculture -> Department of Marine Biology and Biotechnology -> Faculty of Oceanography and Geography -> Rector		
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Konrad Ocalewicz	
	Teachers		

Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	15	1.0	9.0	25

Subject objectives	1: introduction of basic concepts in molecular biology. 2: familiarizing the student with modern molecular biology techniques. 3: familiarizing the student with the possibilities of using molecular biology techniques in the study of marine organisms. 4: the student acquires practical skills in basic molecular biology methods and operation of laboratory equipment.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[OCEANMU2-K03] is ready to effectively organize his/her own work, is active and persistent and punctuality in completing tasks, is ready to carrying out evaluation of their own activities	Student is ready to effectively organize his/her own work regarding marine organisms and performed using molecular tools, is active and characterized by perseverance and punctuality in implementation tasks, is self-critical and draws conclusions based on self-analysis	[SK8] observation of student's independent or team work
[OCEANMU2-U04] is ready to develop in an analytical and synthetic way research and analysis results and based on them creating conclusions	Student is able to analytically and synthetically prepare the results of genetic tests and molecular analyzes and conduct correct ones based on them inference	[SU2] presentation/project/paper/ report
[OCEANMU2-W04] has an in-depth understanding of the latest research trends in oceanography, as well as the possibilities for practical application of related achievements; evaluates their usefulness and limitations in solving scientific research problems, and critically analyzes and assesses their applicability	Student knows and understands in-depth the latest research trends the scope of practical use of molecular tools in marine research as well as the possibilities of practical application of scientific achievements.	[SW1] oral statement/ conversation/discussion [SW2] presentation/project/paper/ report
[OCEANMU2-U02] is able to fluently and accurately use scientific terminology when presenting and discussing oceanographic issues, and to propose and justify innovative solutions	Student can use scientific terminology fluently and appropriately presenting and discussing problems in the field of biology and diagnostics molecular in the context of marine research	[SU1] oral statement/conversation/ discussion
[OCEANMU2-K01] is ready to plan, implement and supervise, individually or collectively, next stages of the entrusted task, is ready to take responsibility for its results;	Student is ready to plan, implement and supervise, individually or in a team, subsequent stages of the assigned task implemented using molecular biology tools, he feels responsibility for its results, cooperates effectively in the team and plays a role in it various functions, including managerial ones	[SK8] observation of student's independent or team work

Subject contents

A1: DNA isolation from tissue fragments of marine organisms: fin, scale, soft tissue. A2: Amplification of the 5S rDNA/SdY/microsatellite DNA region using PCR. A3: Agarose gel electrophoresis of the PCR product/ isolated DNA. A4. Presentation of the obtained results.

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
final paper and discussion	51.0%	100.0%
